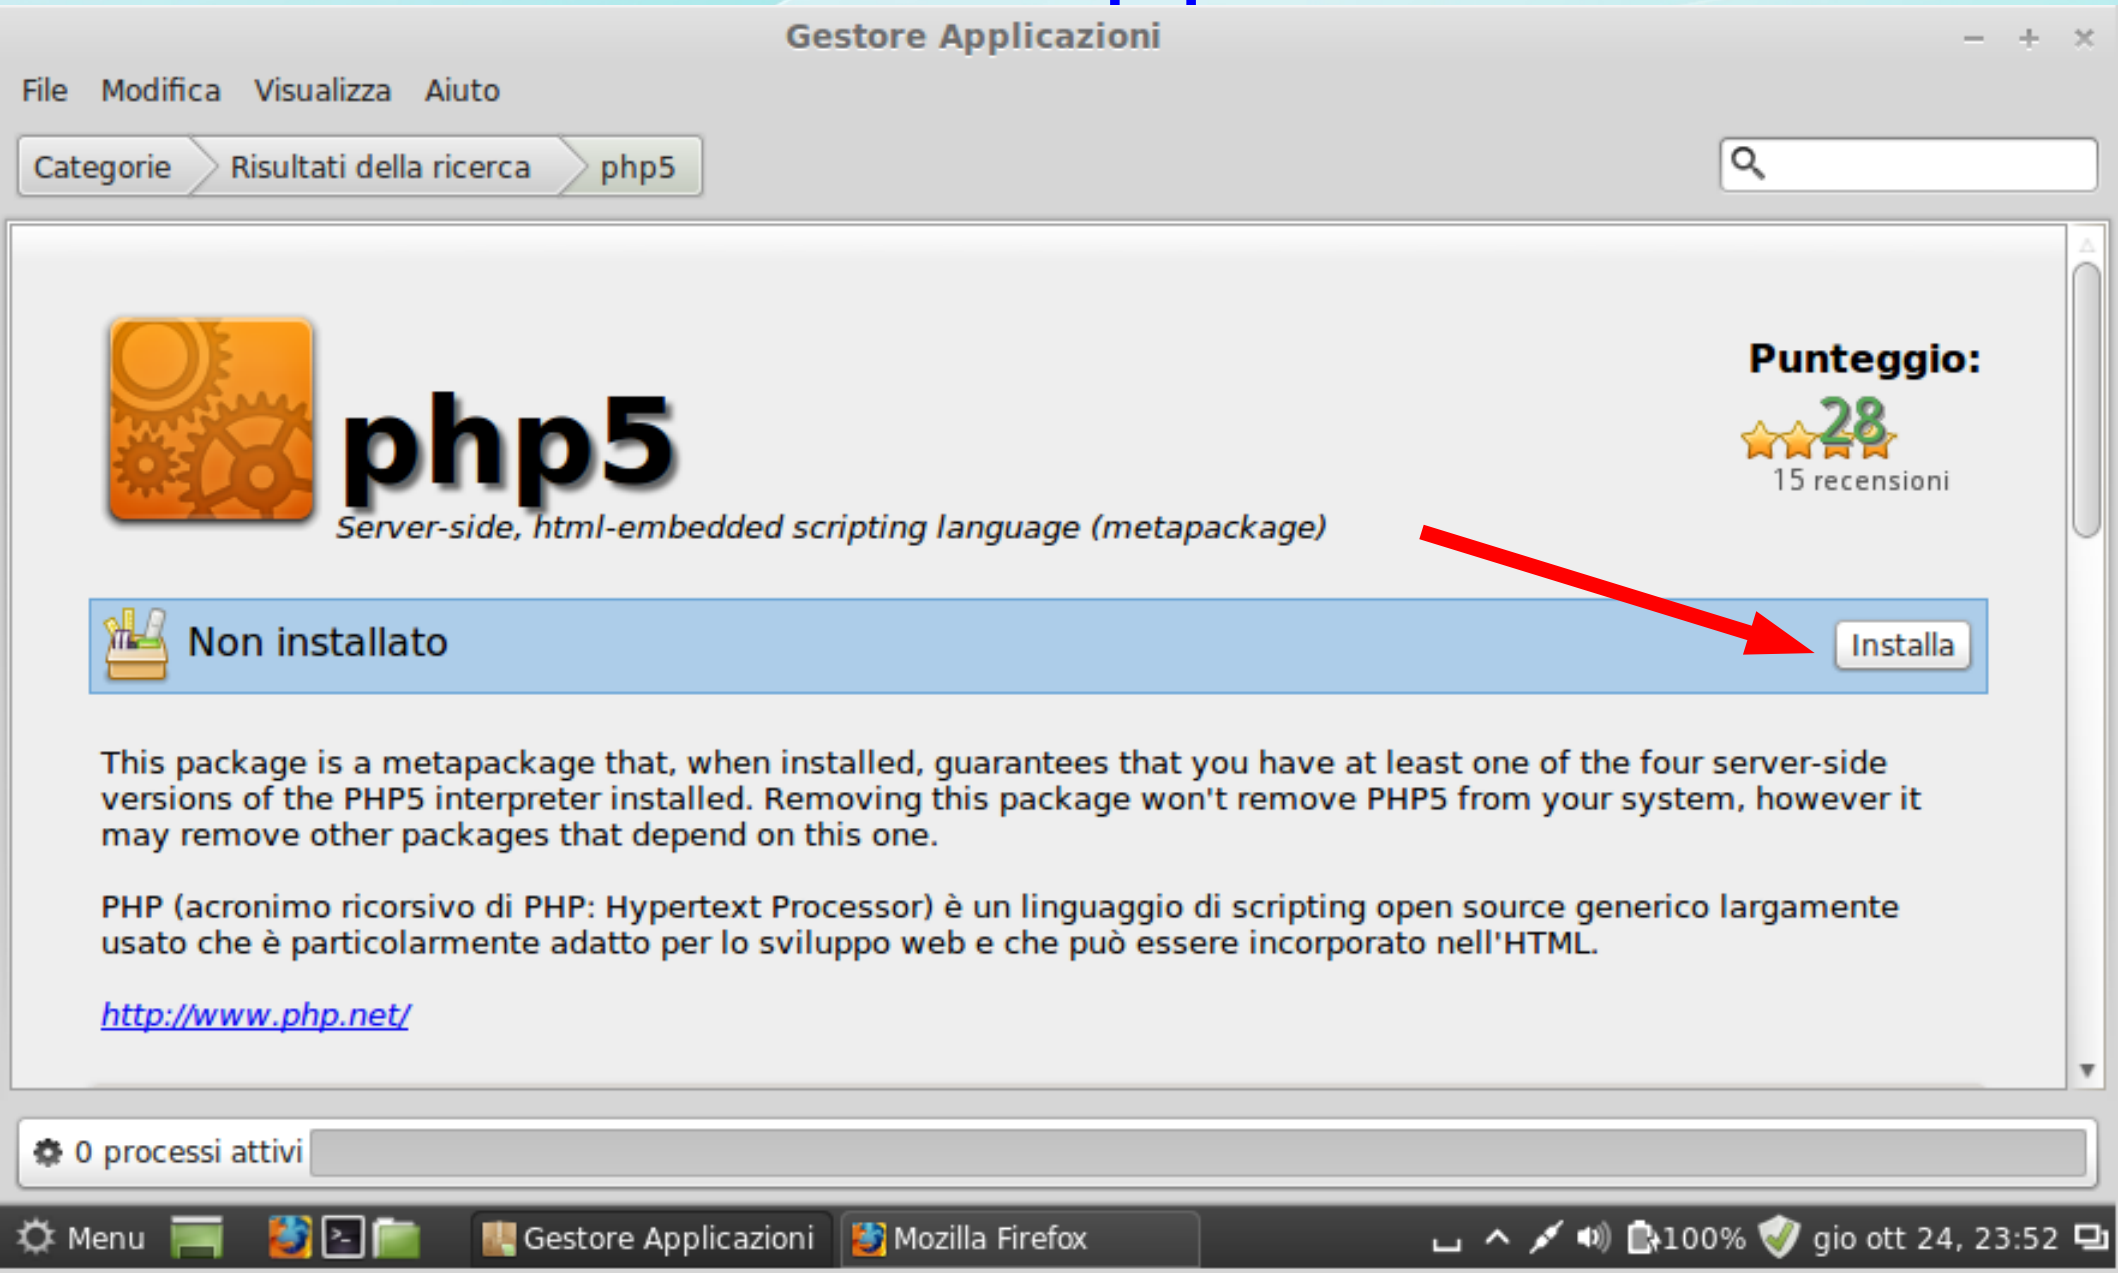
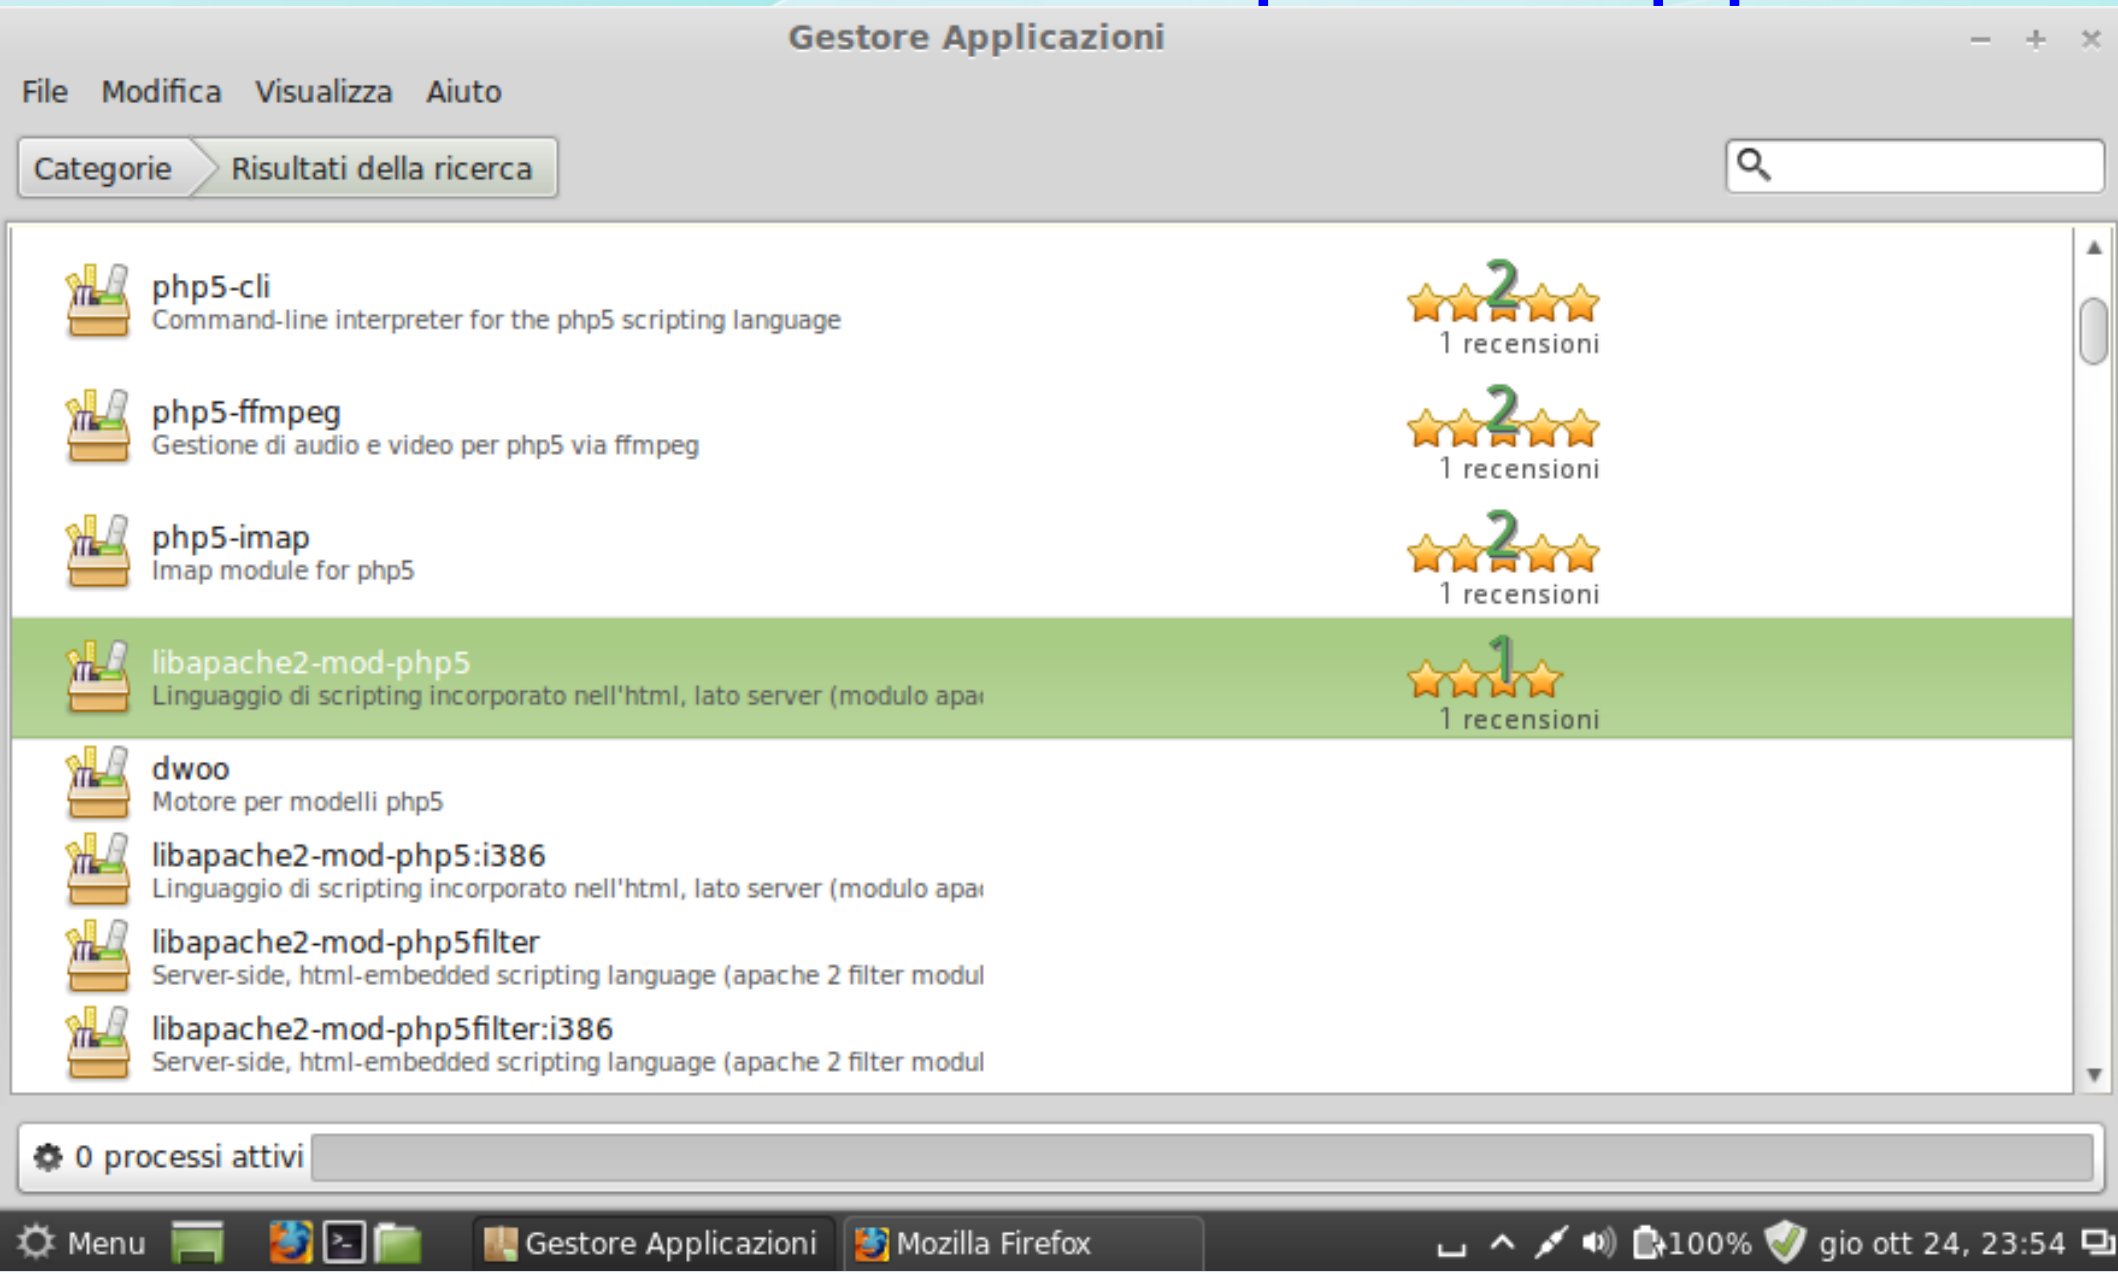
Installo “php5”



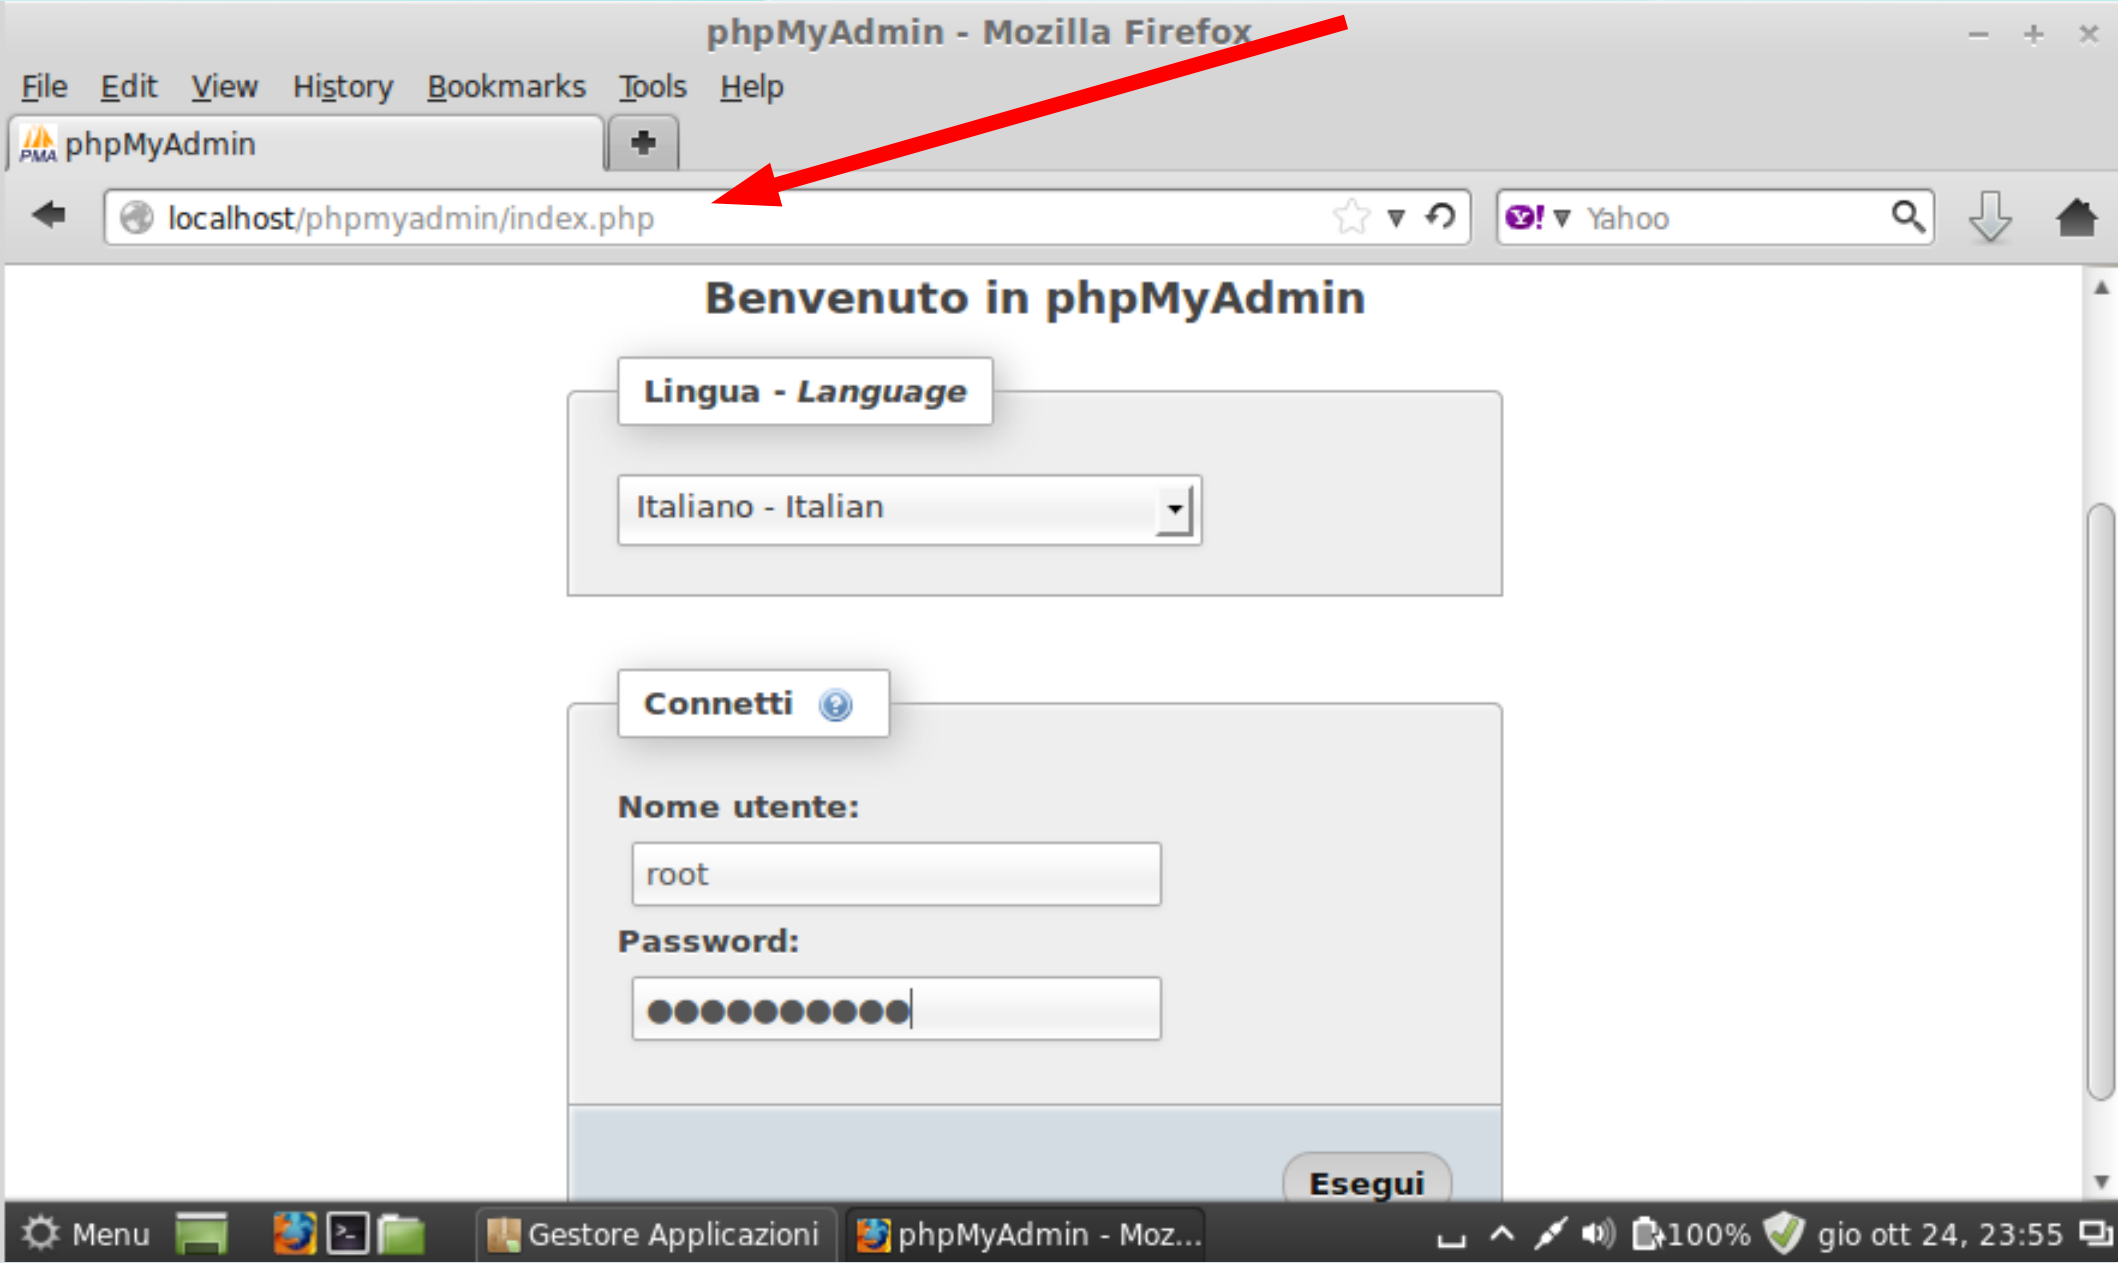
Installo “php5-mysql”

Scorro l'elenco e seleziono “libapache2-mod-php5”

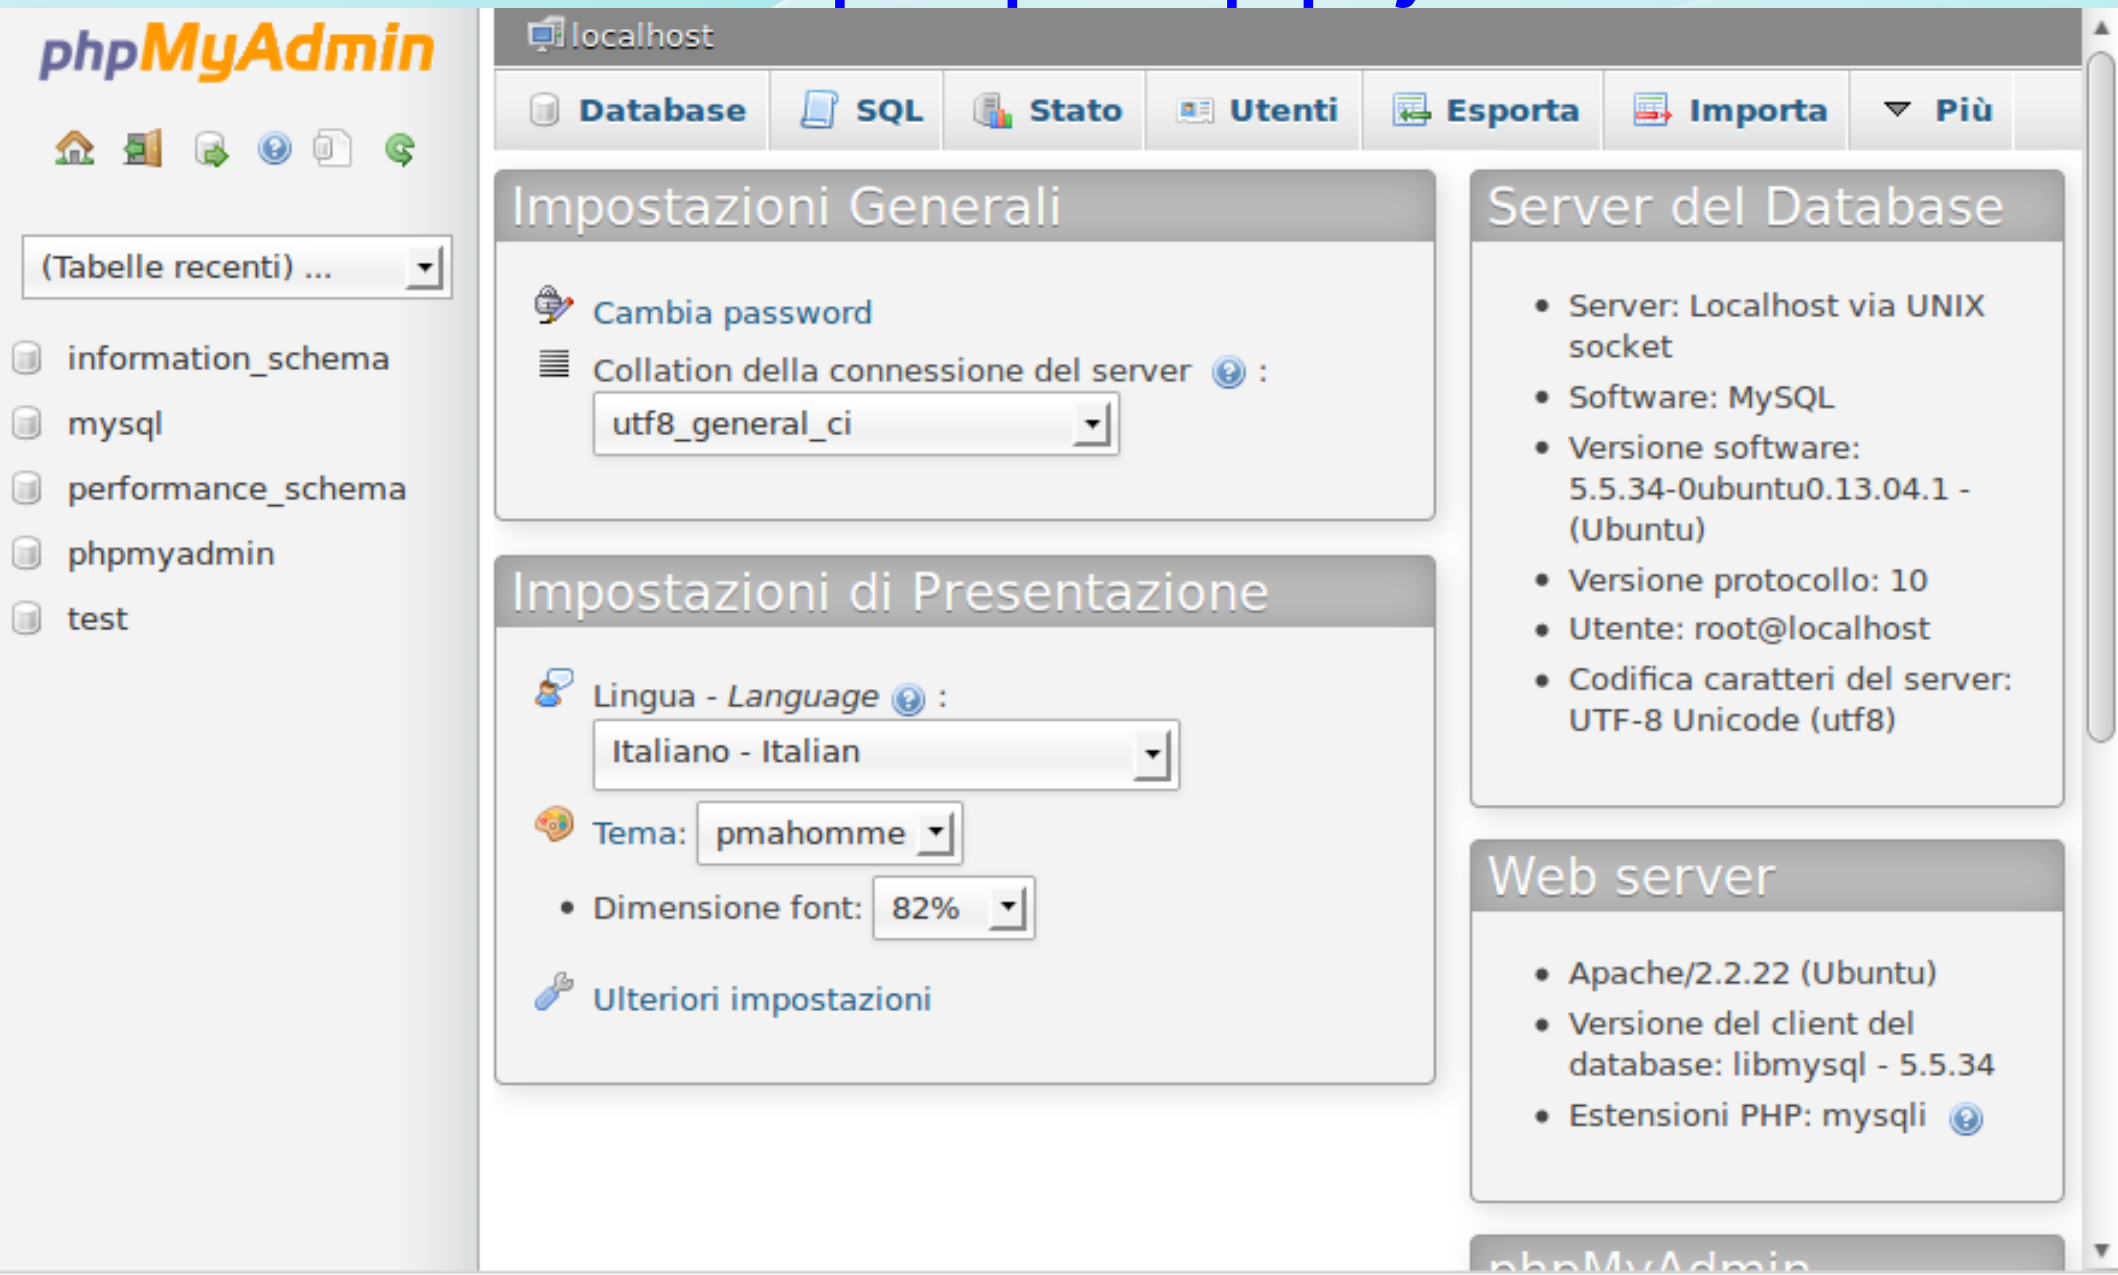


Installo “libapache2-mod-php5”

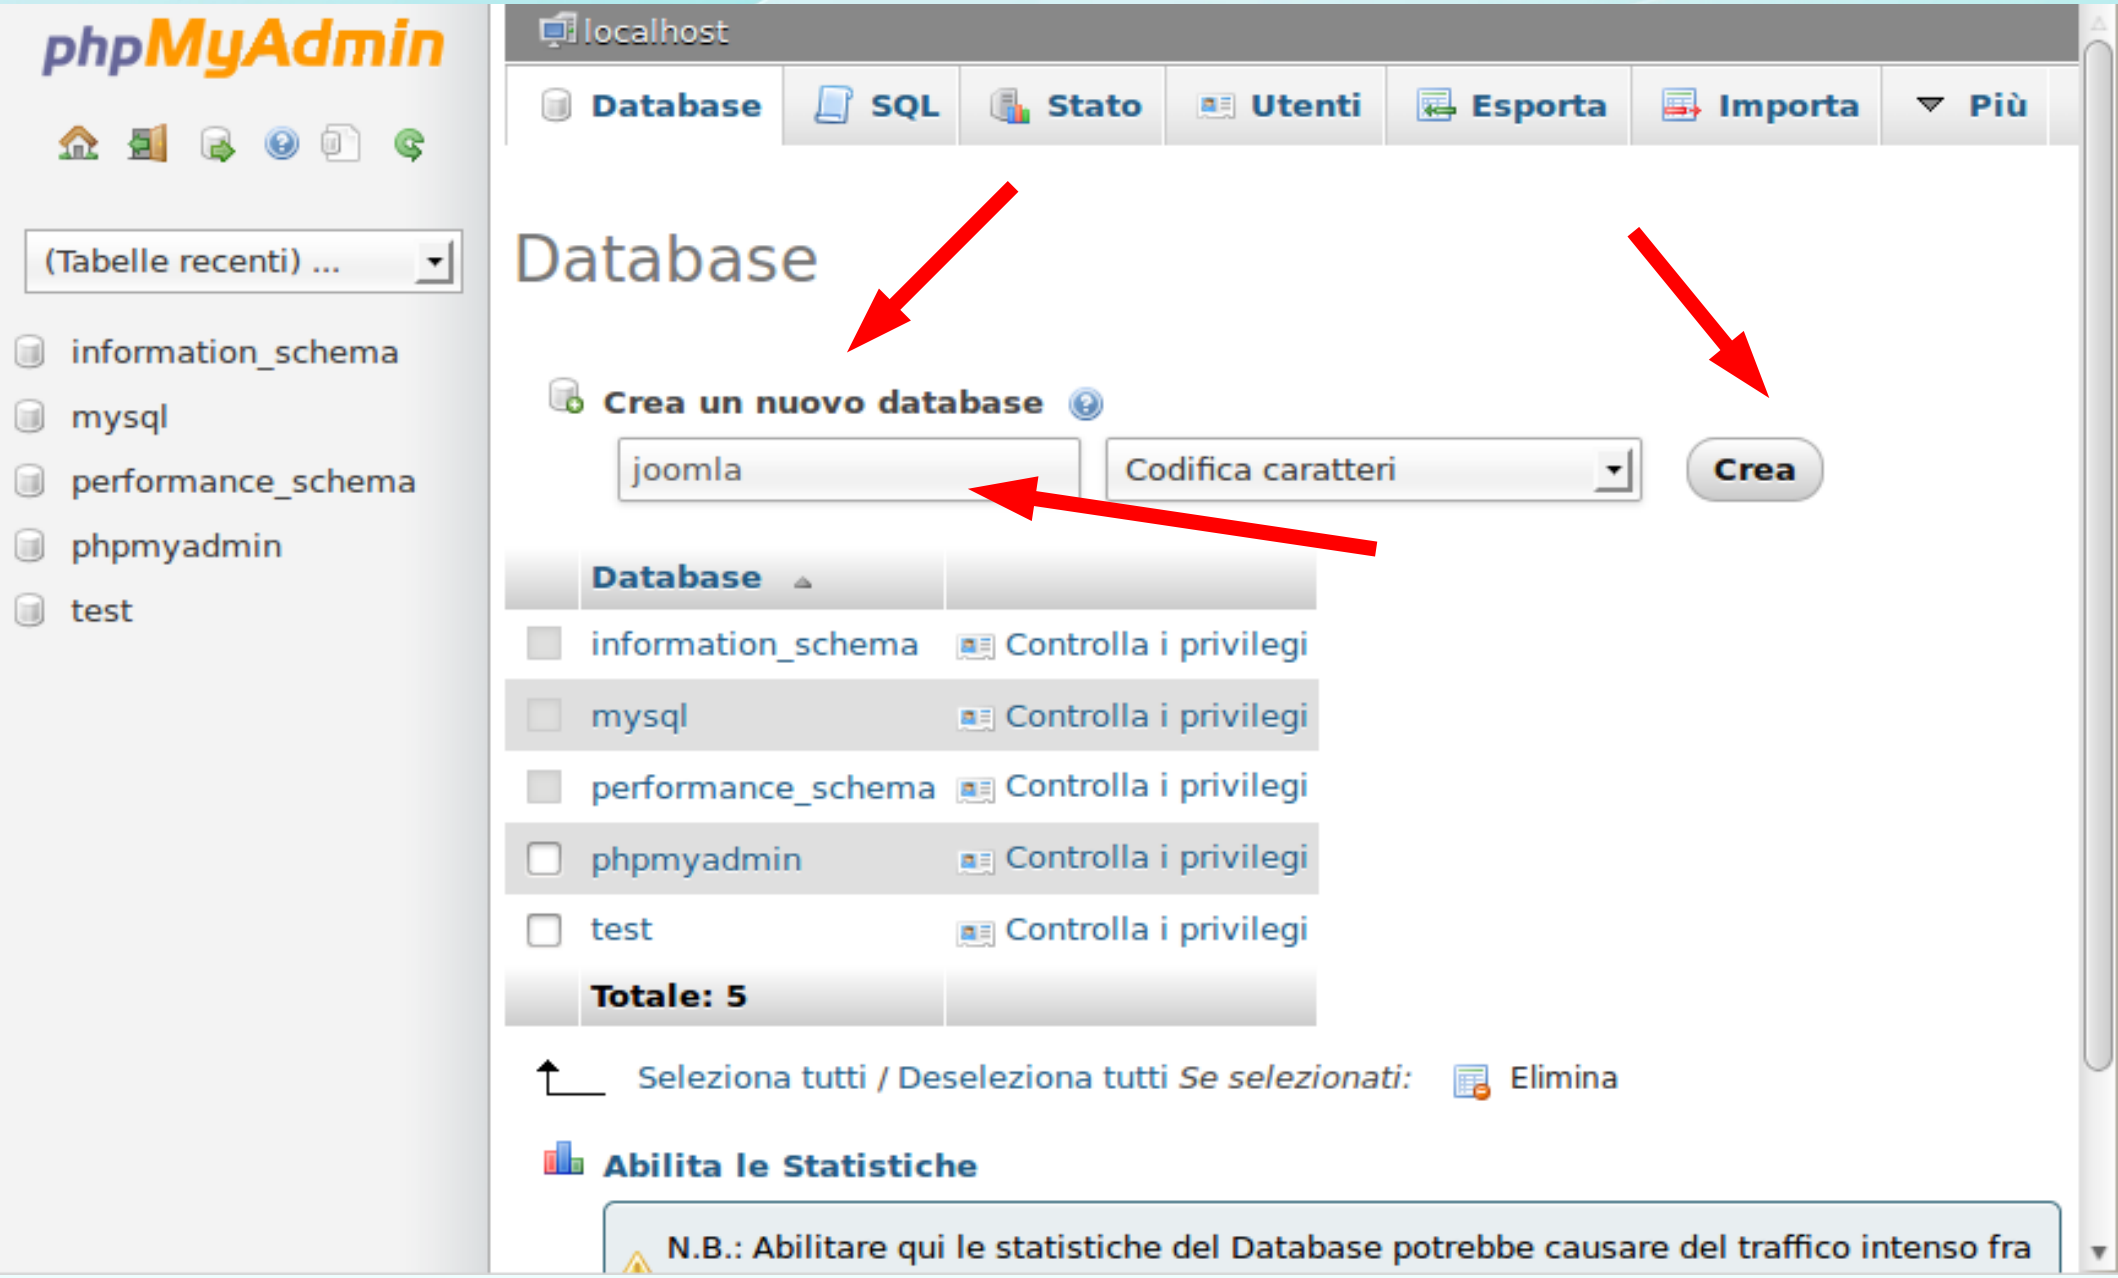
Entro in phpMyAdmin tramite http://localhost/phpmyadmin



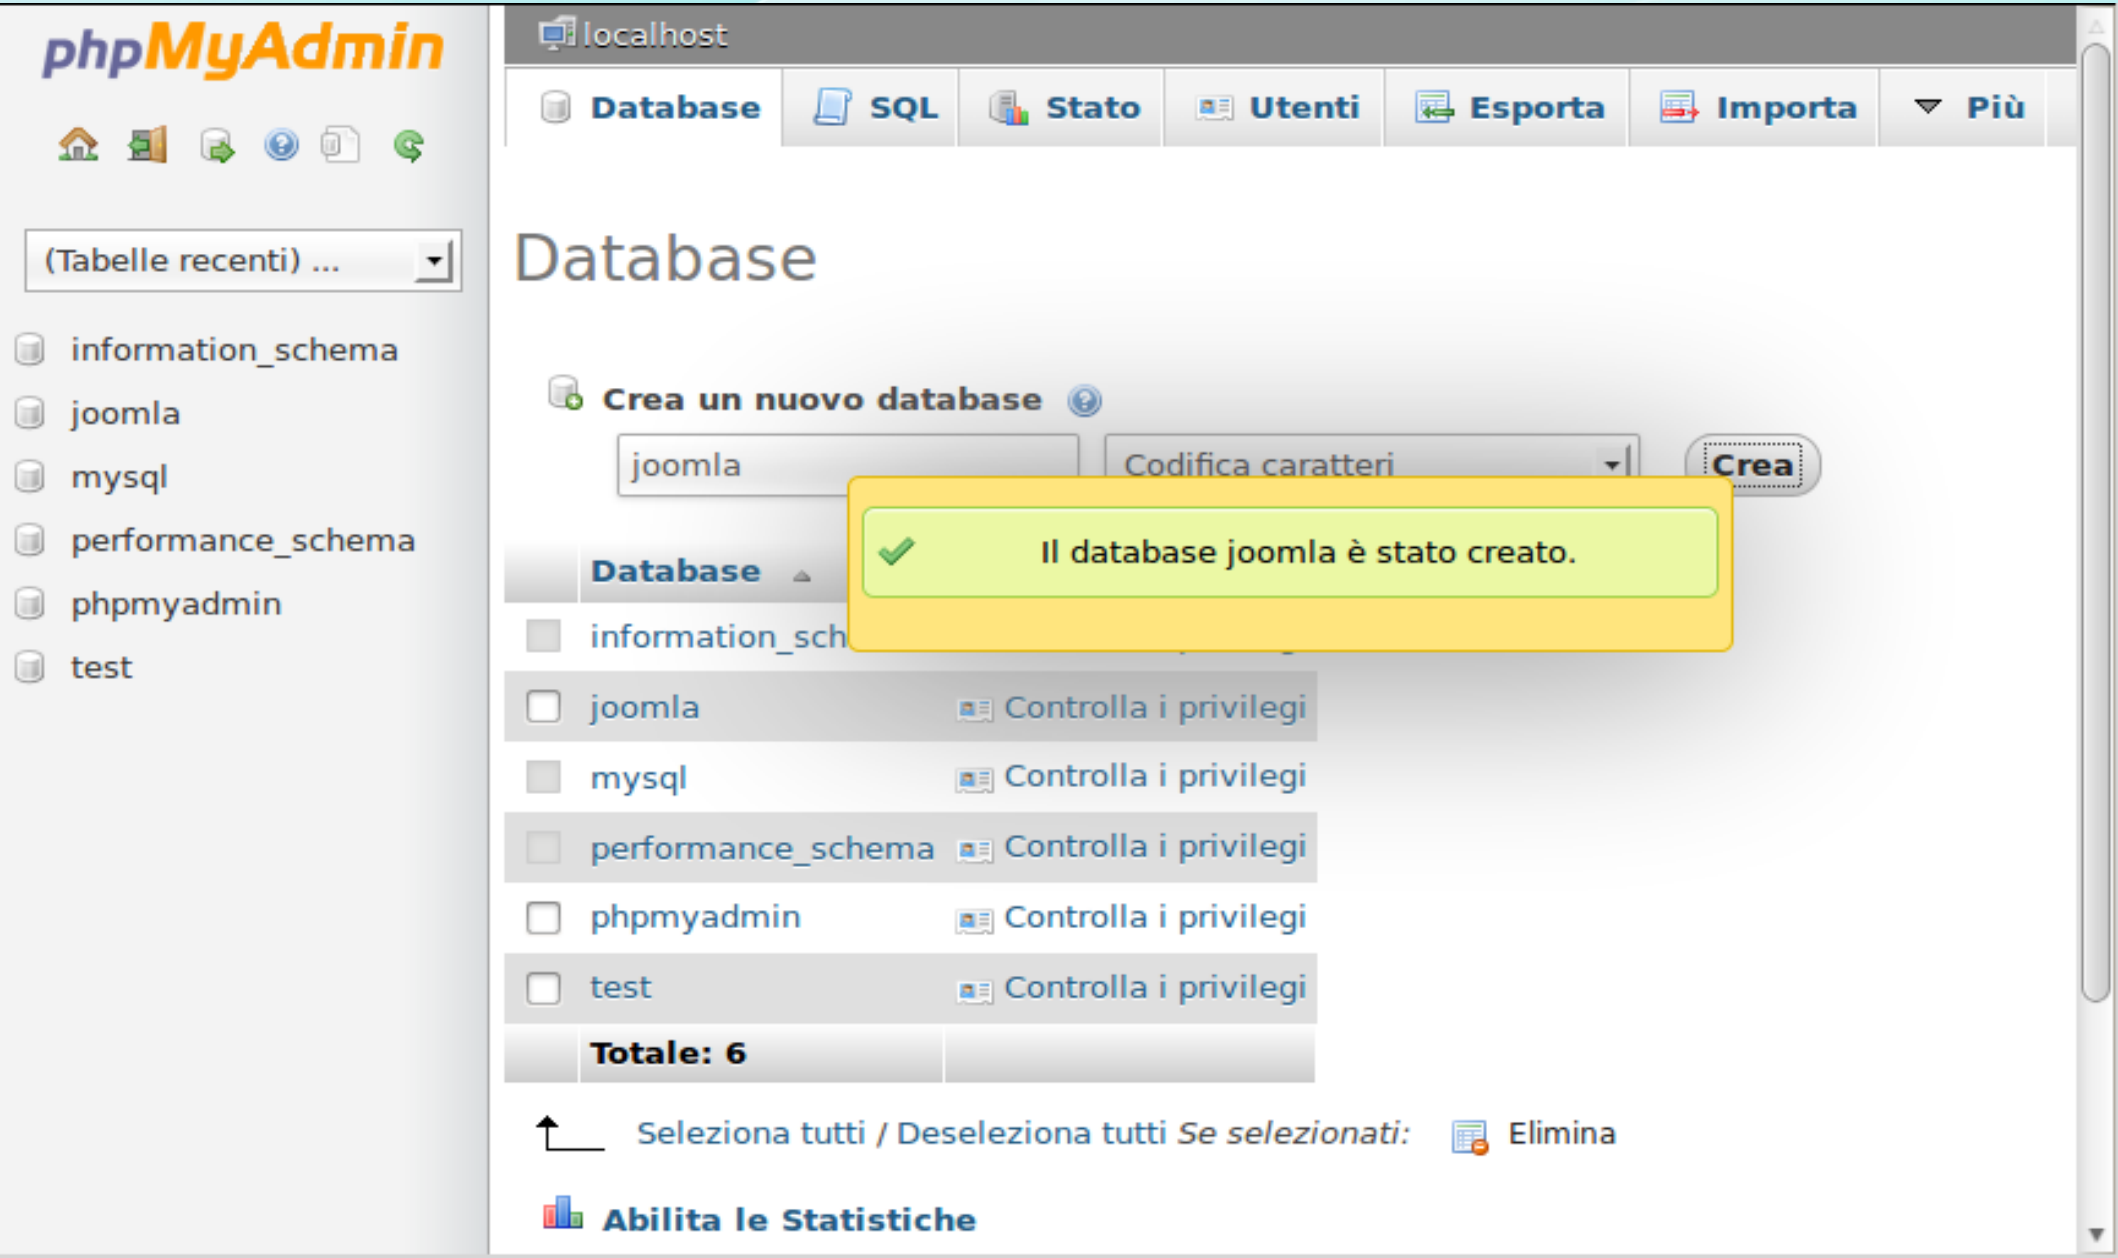
Schermata principale di phpMyAdmin



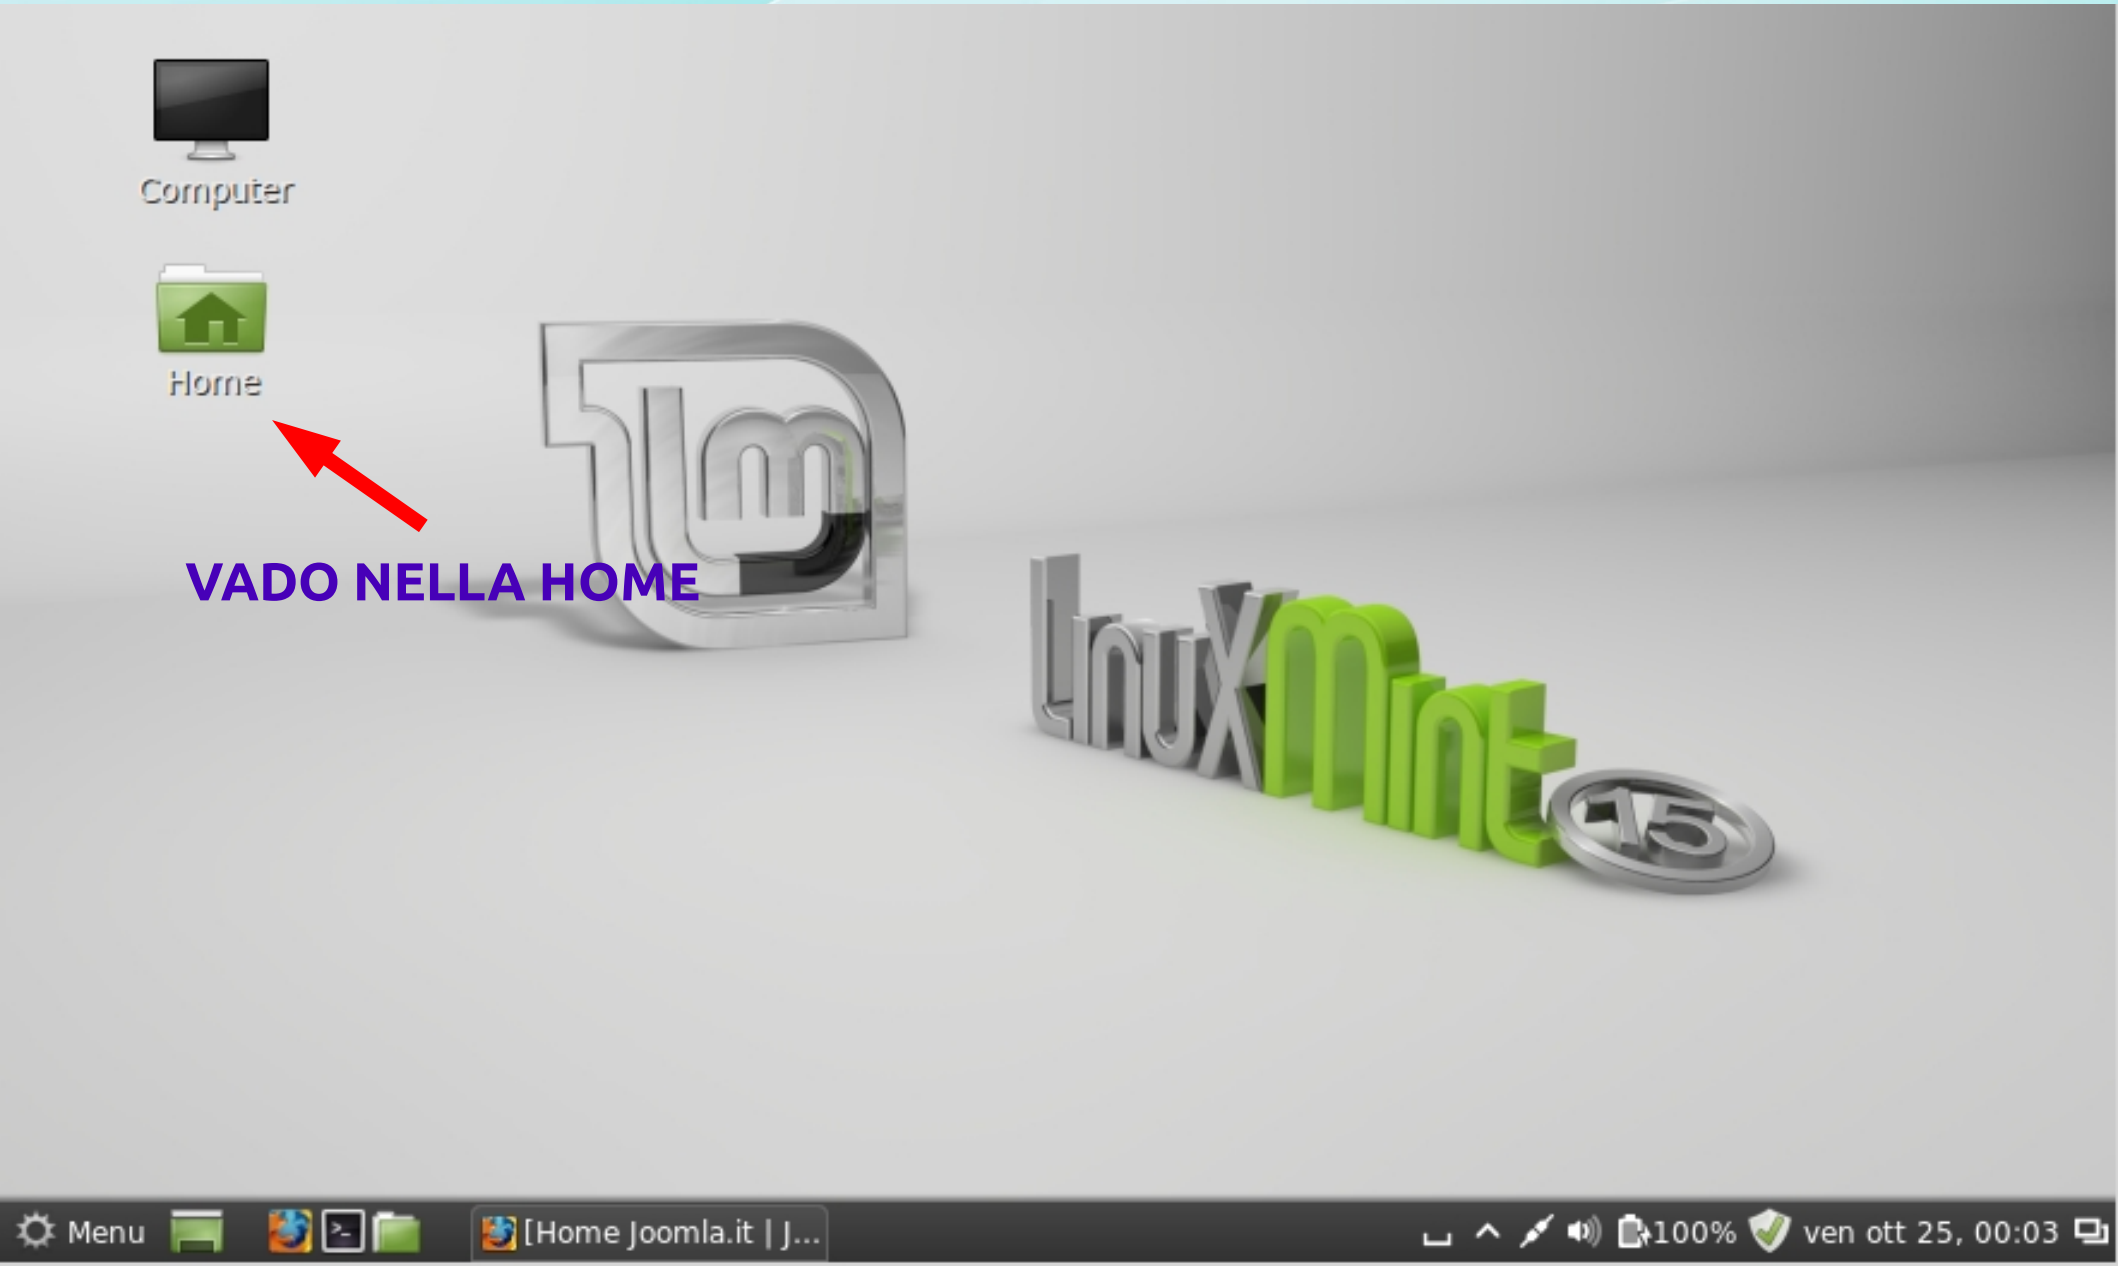
Vado nello schermata "Database" e creo un nuovo db per Joomla



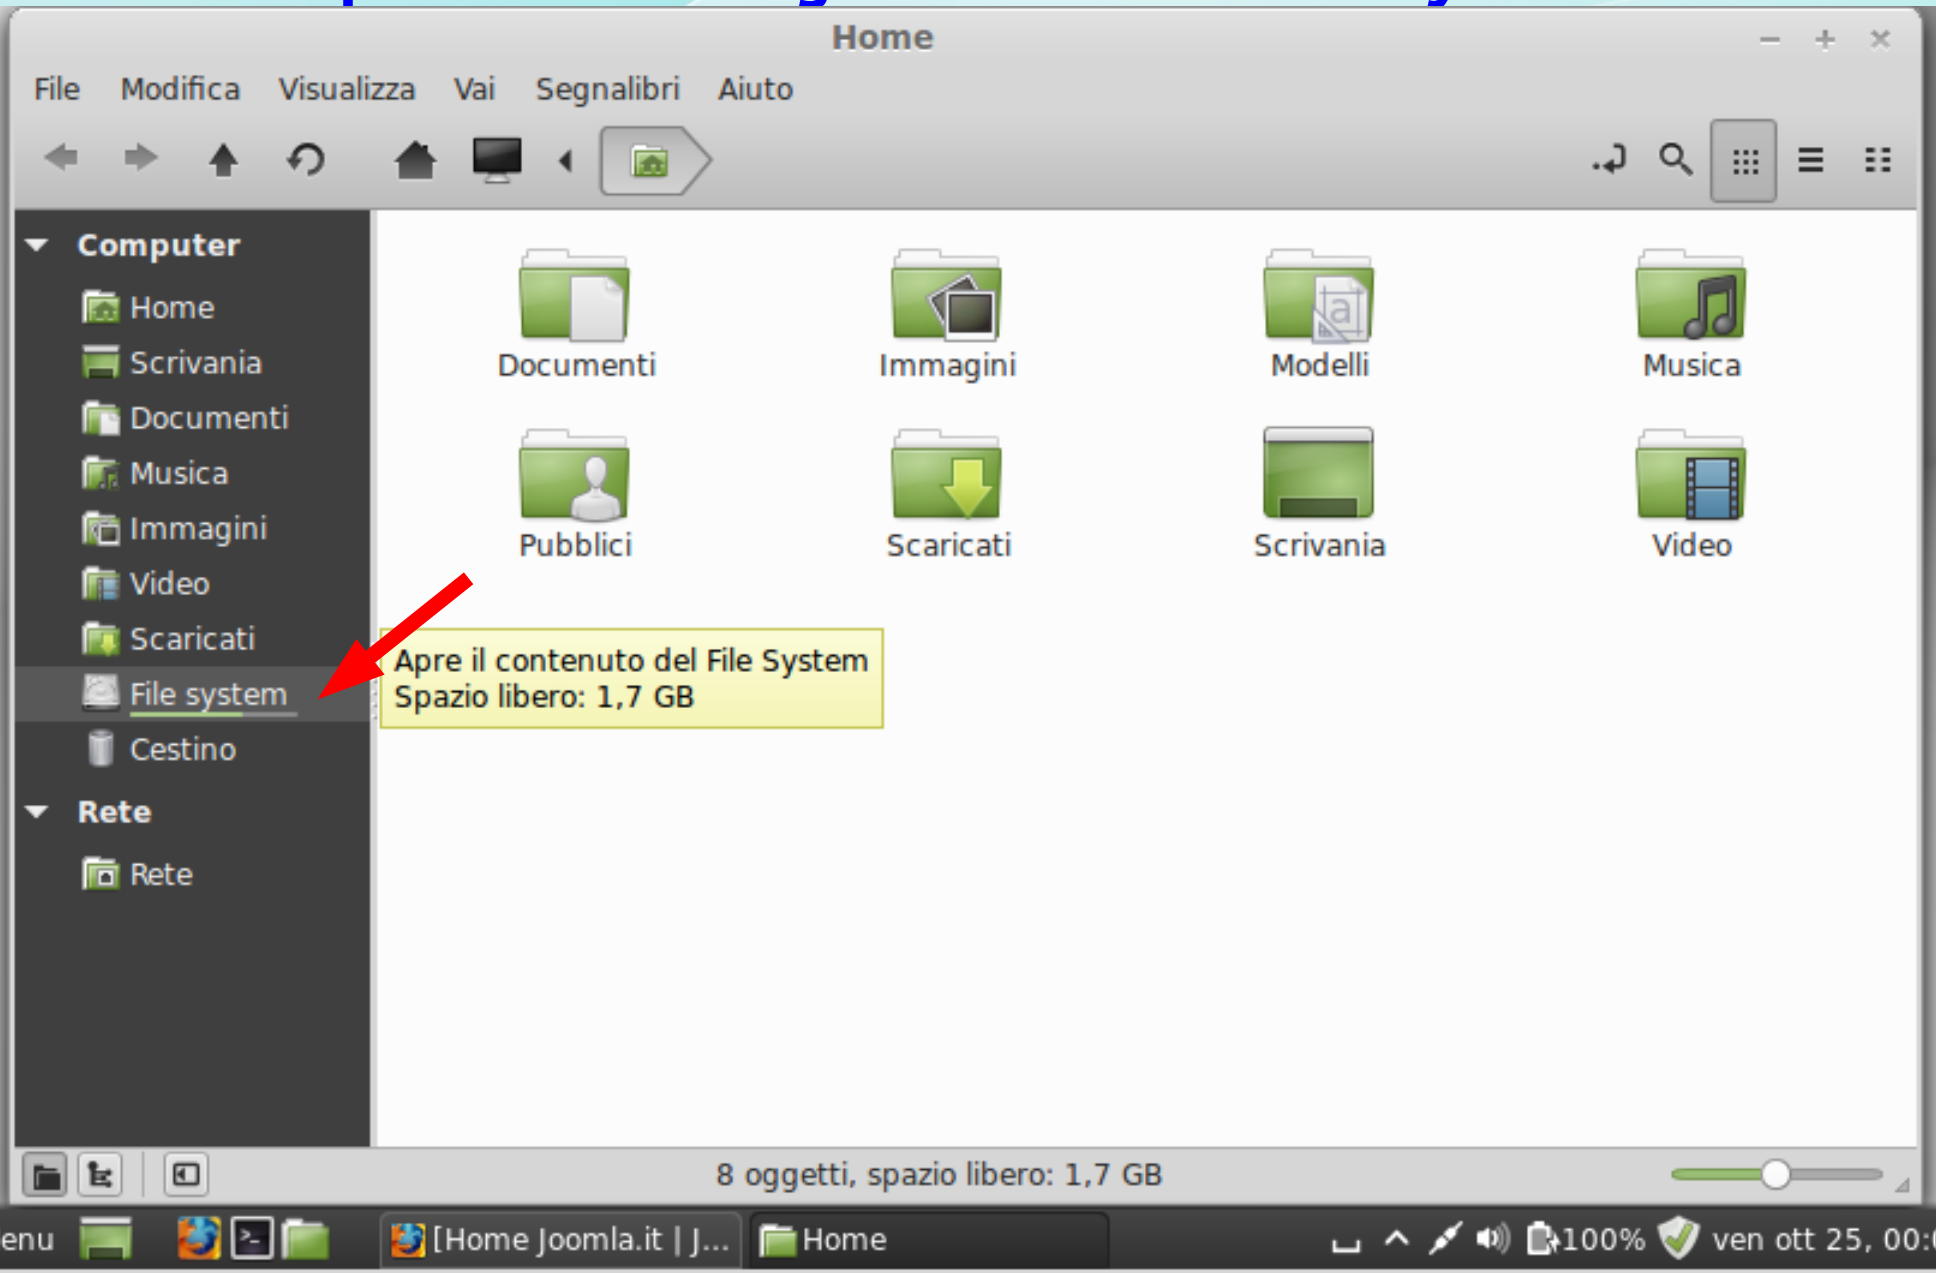
Database creato!



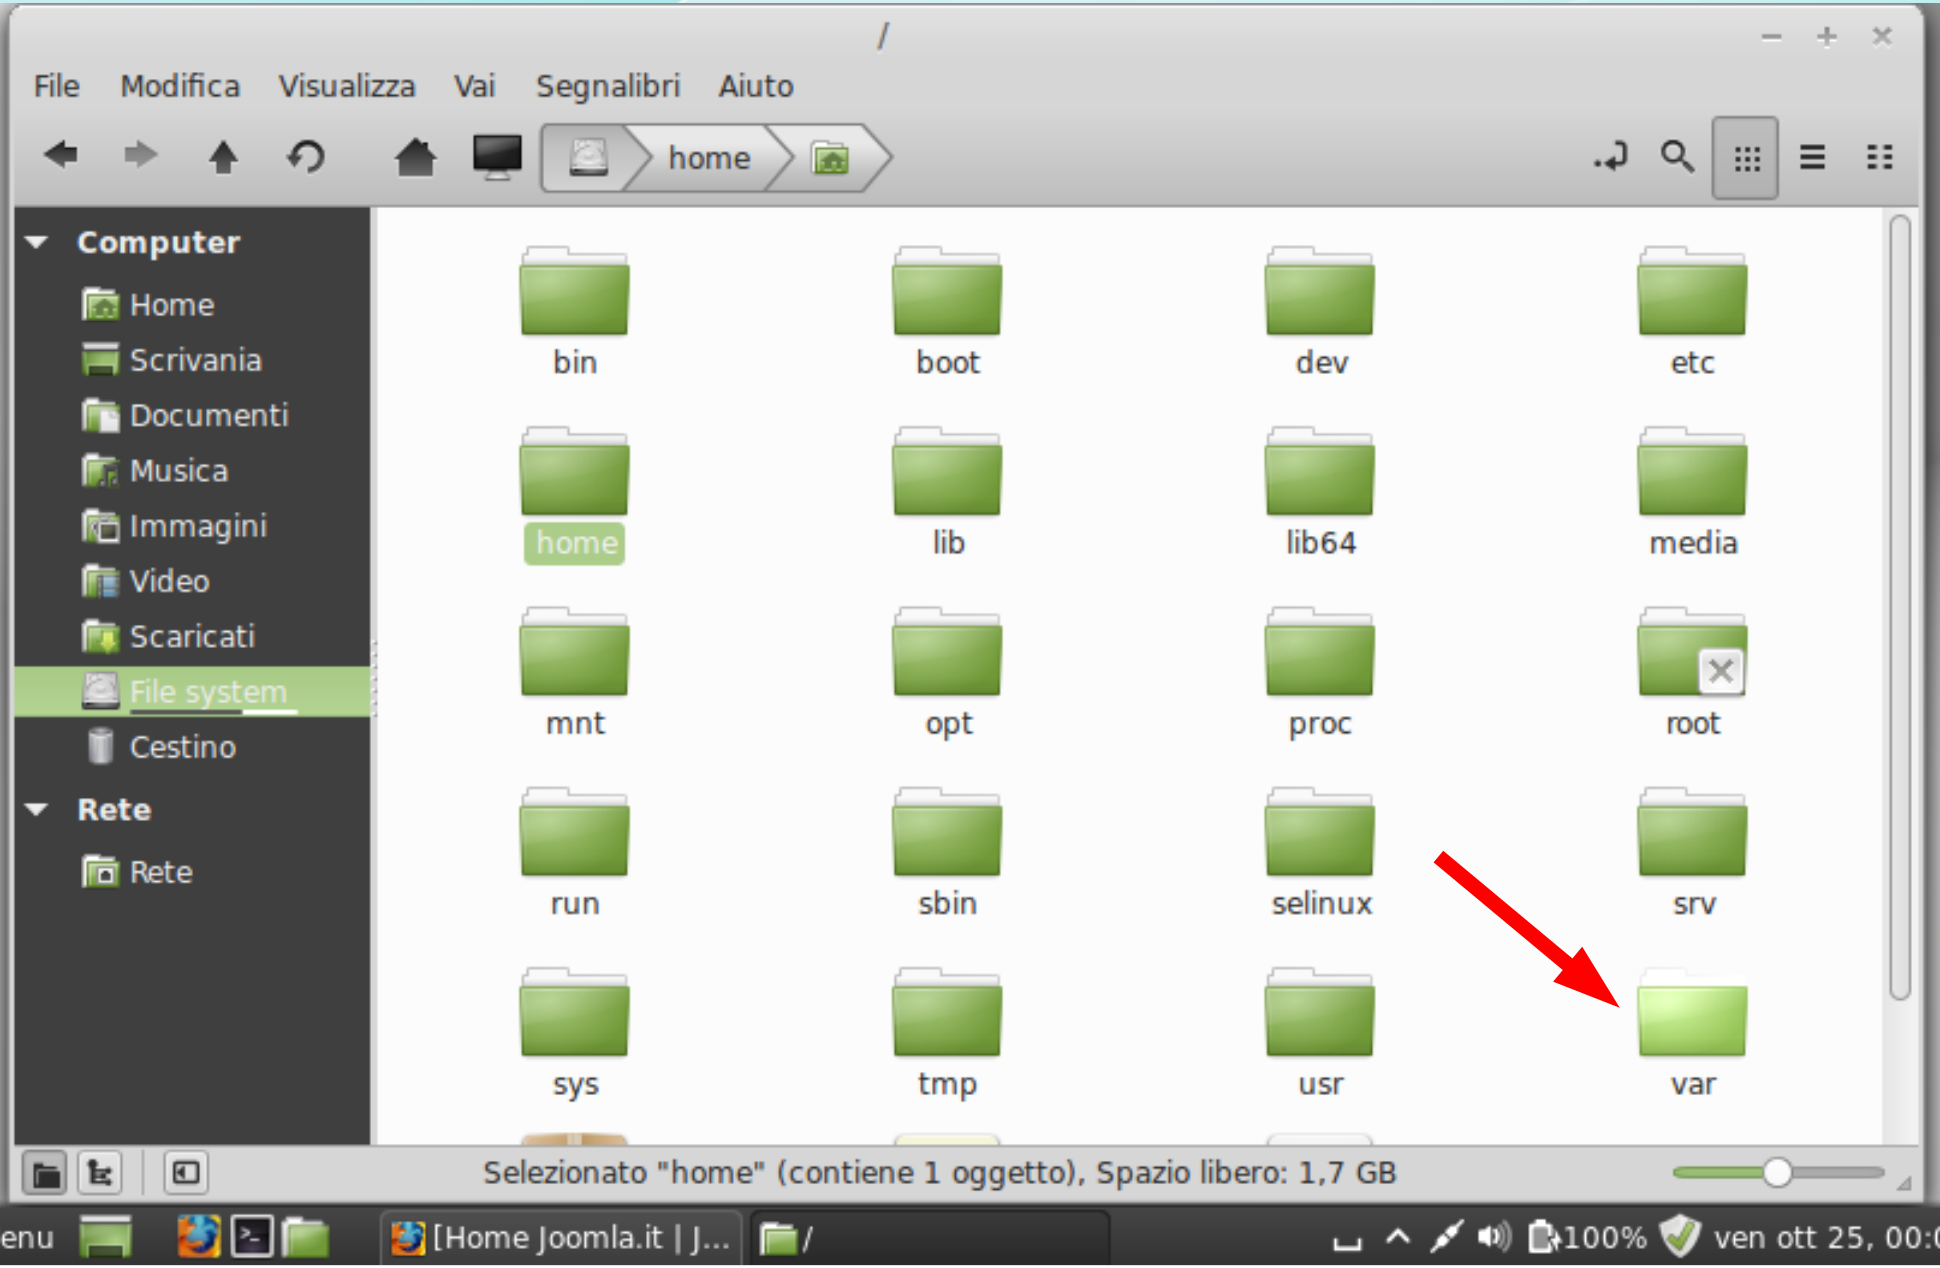
LA PIATTAFORMA L.A.M.P. È PRONTA PER L'USO!!!



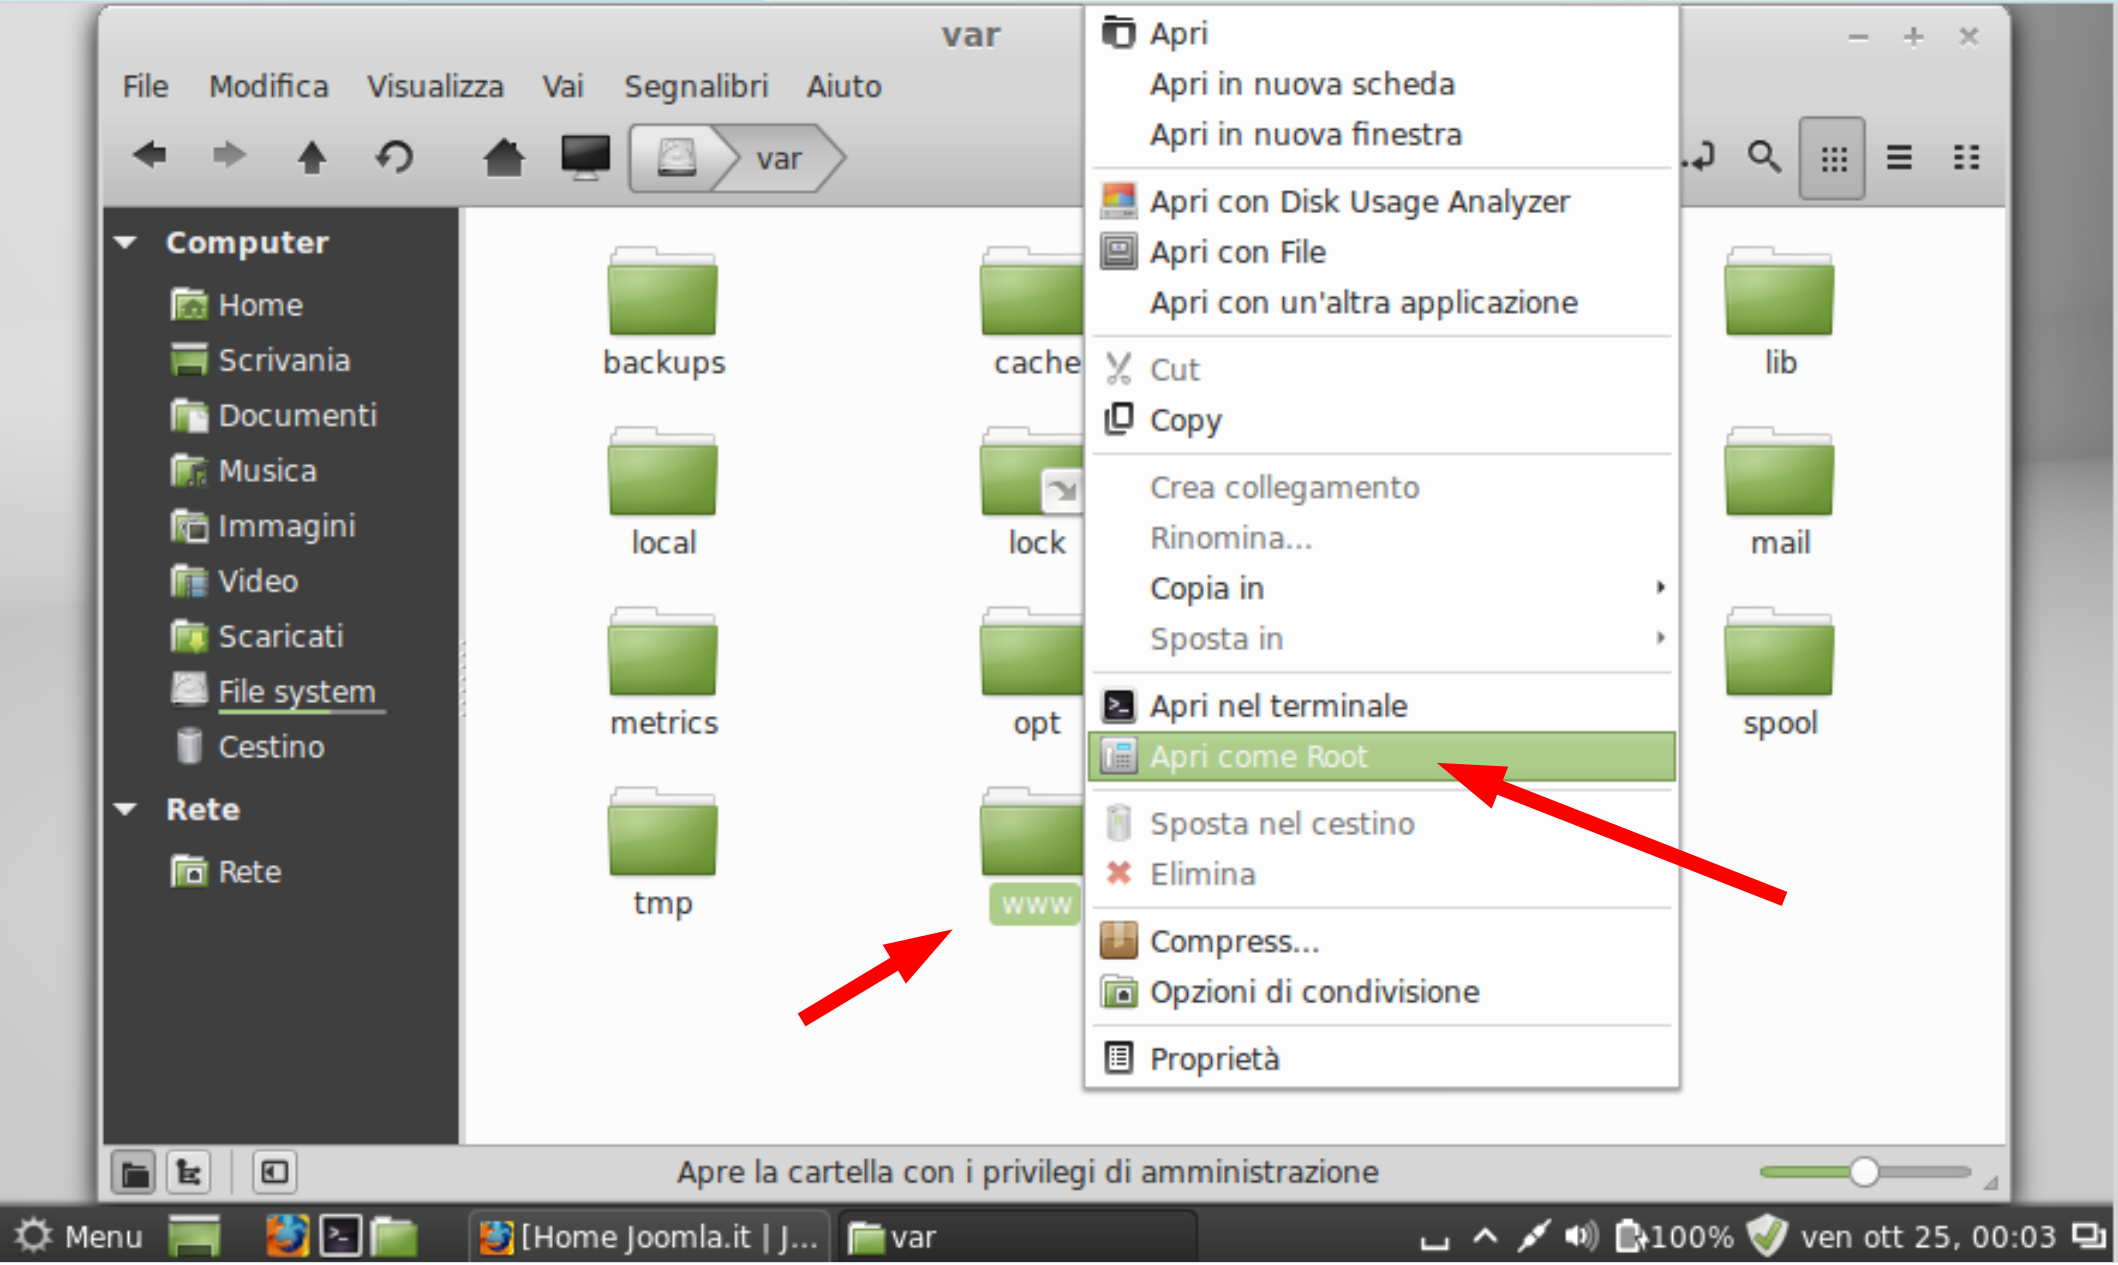
Apro il file manager e clicco su “File System”



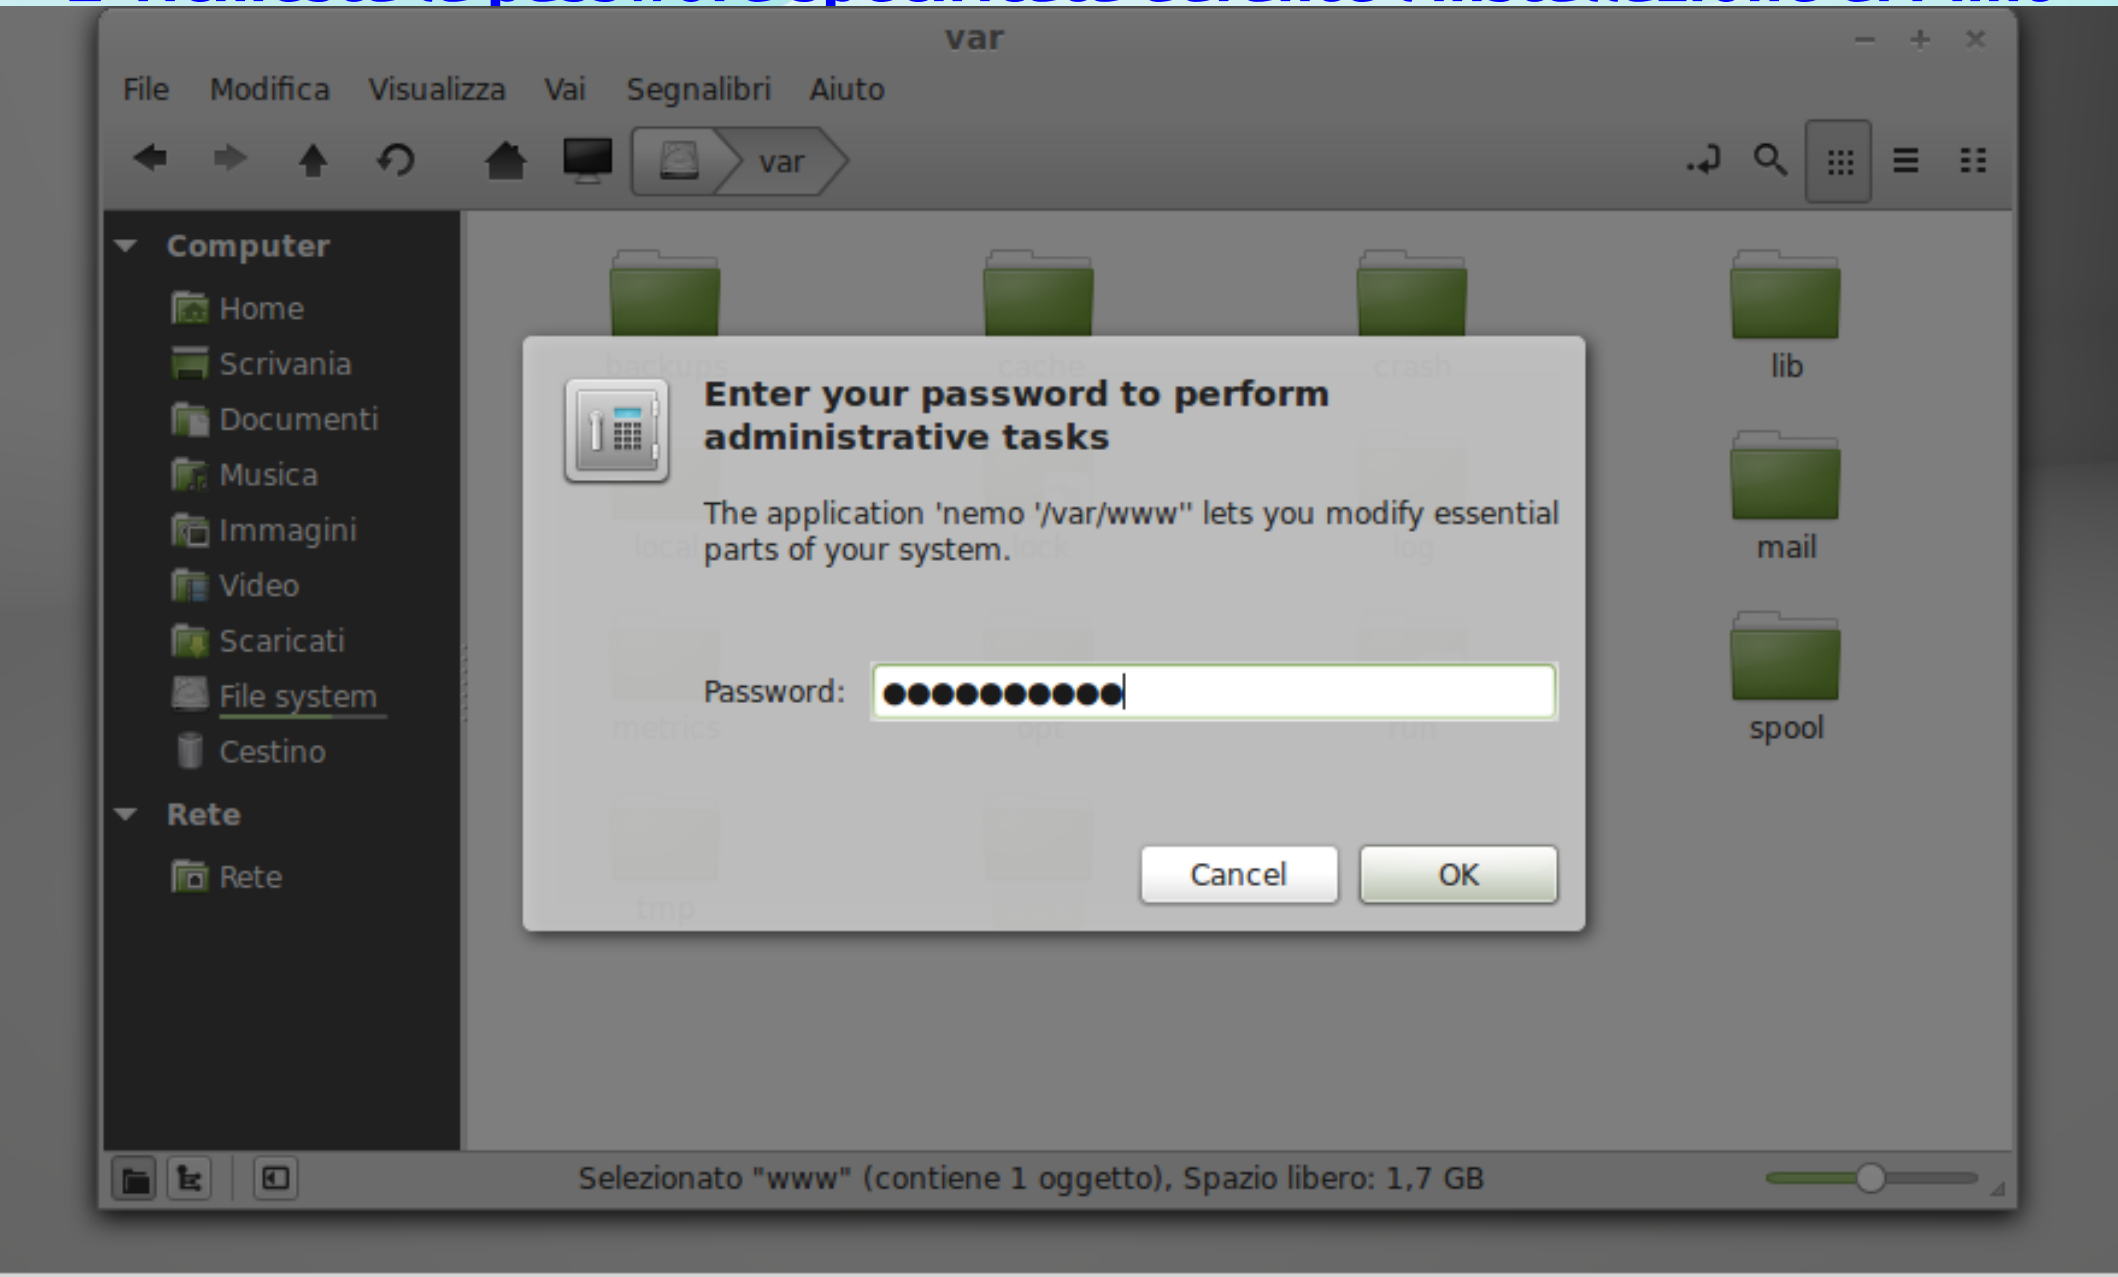
Ecco come appare il file system di Linux! Apro la cartella “var”



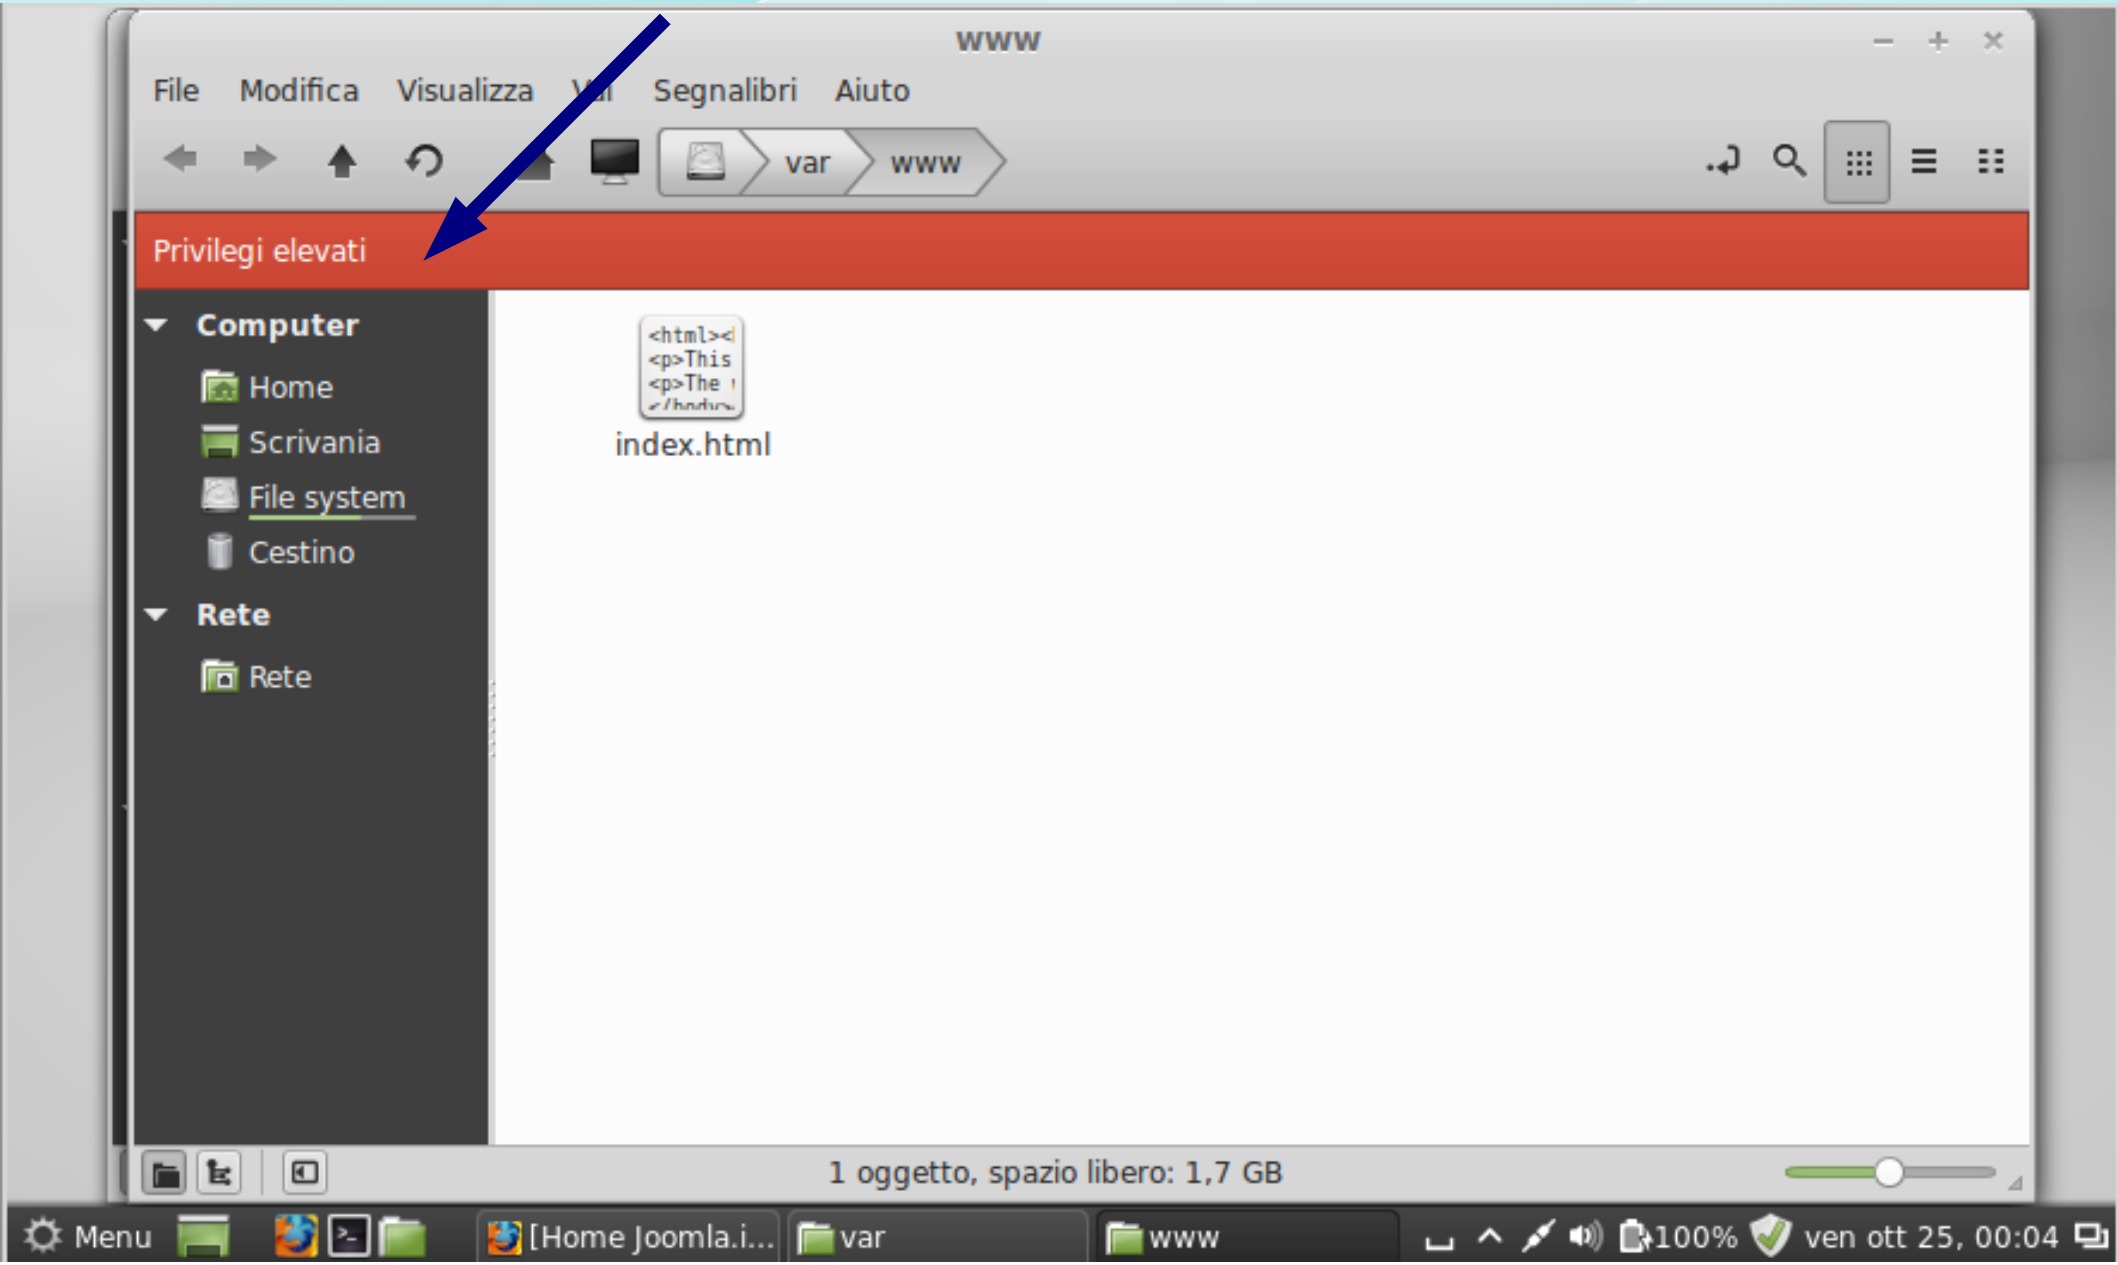
Apro la cartella “www” dentro “var” come utente “root”



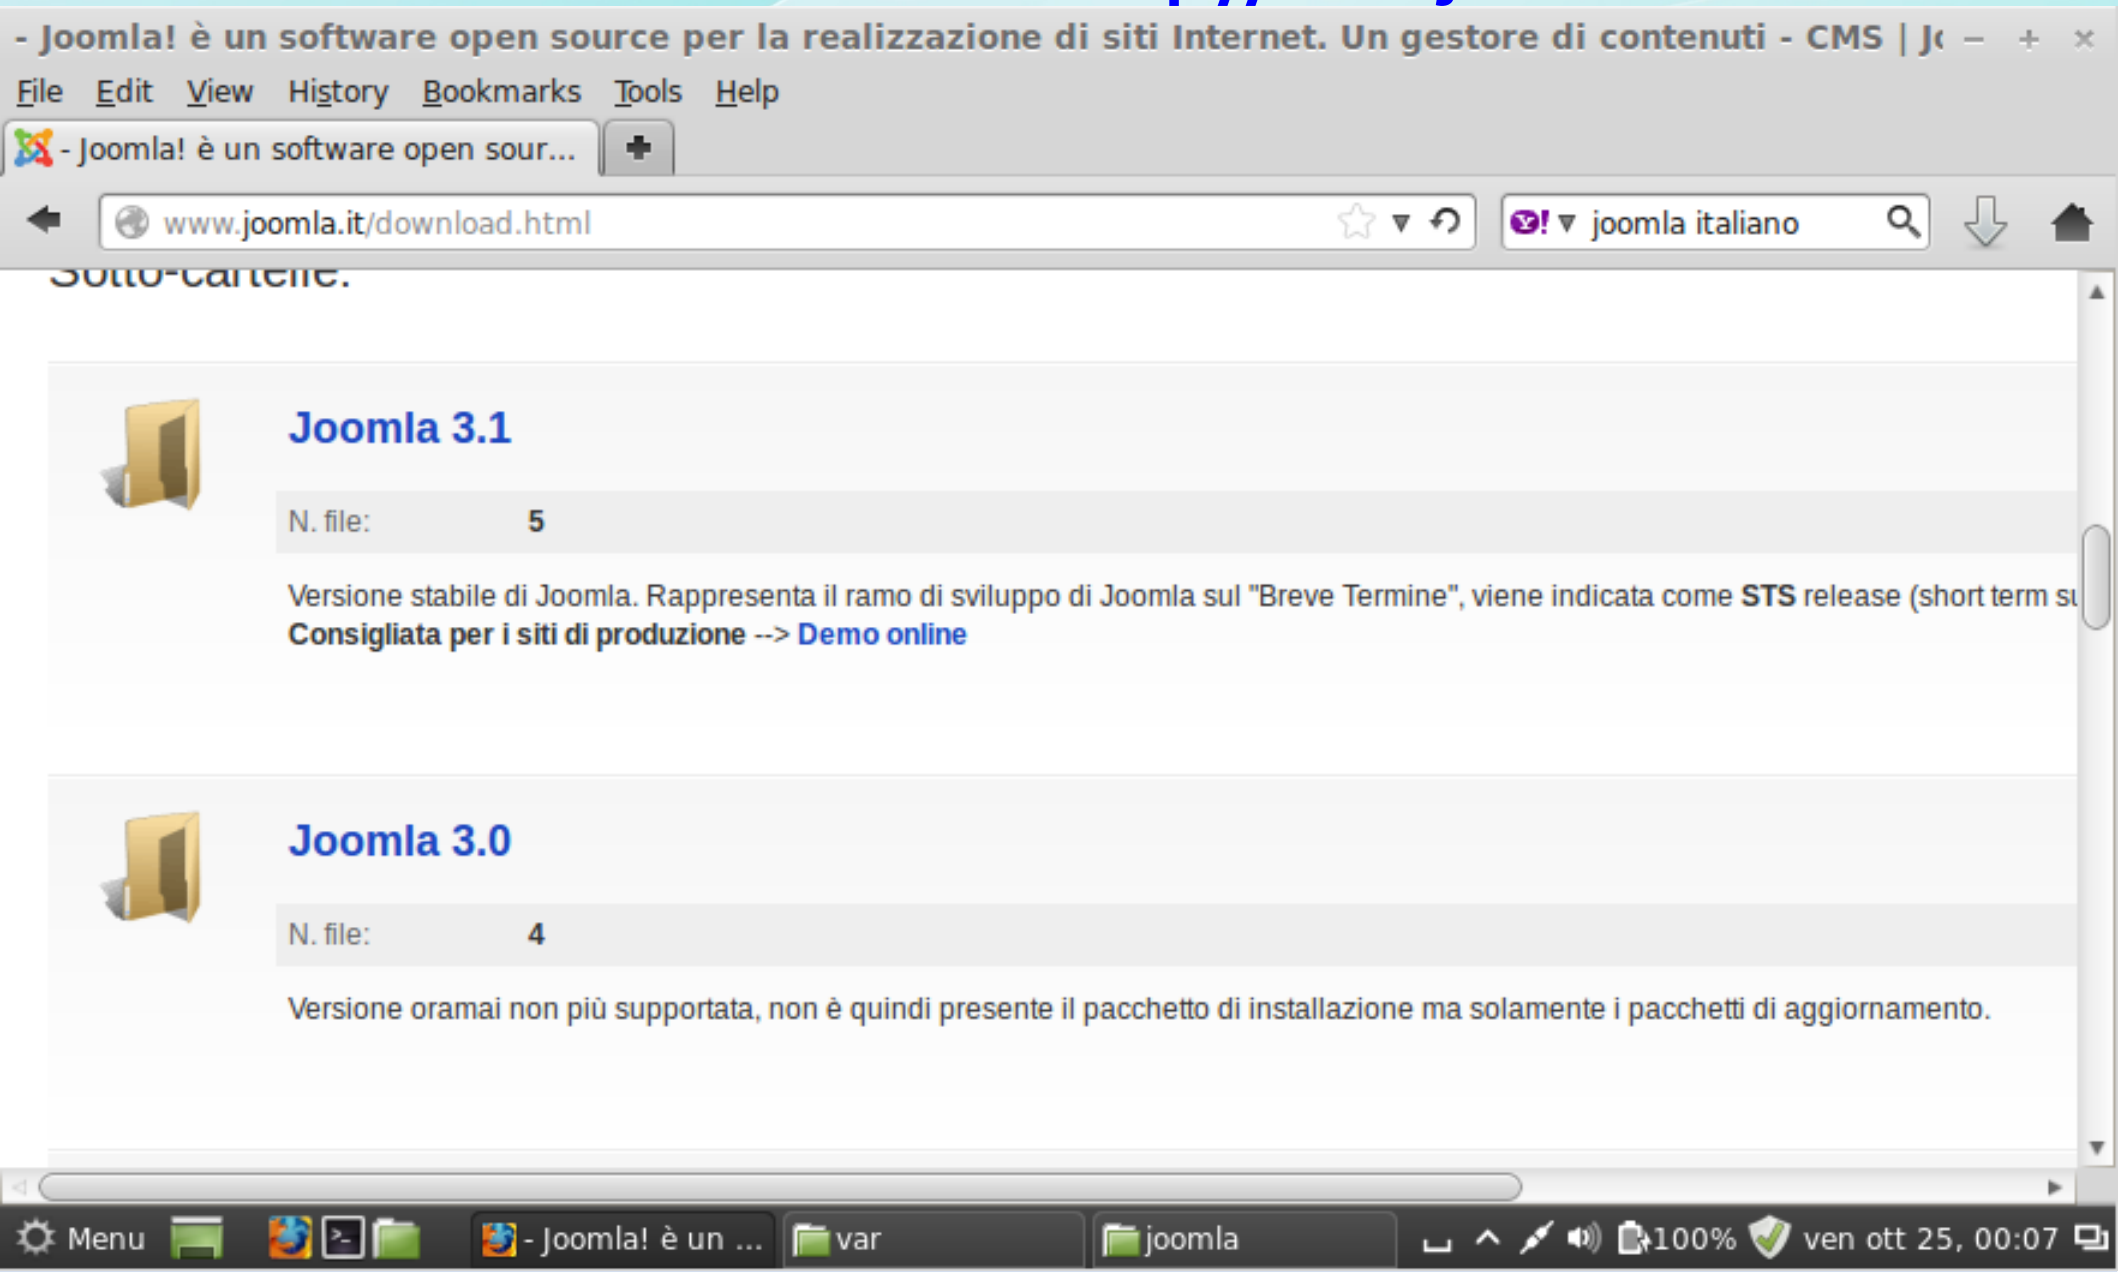
E' richiesta la password specificata durante l'installazione di Mint



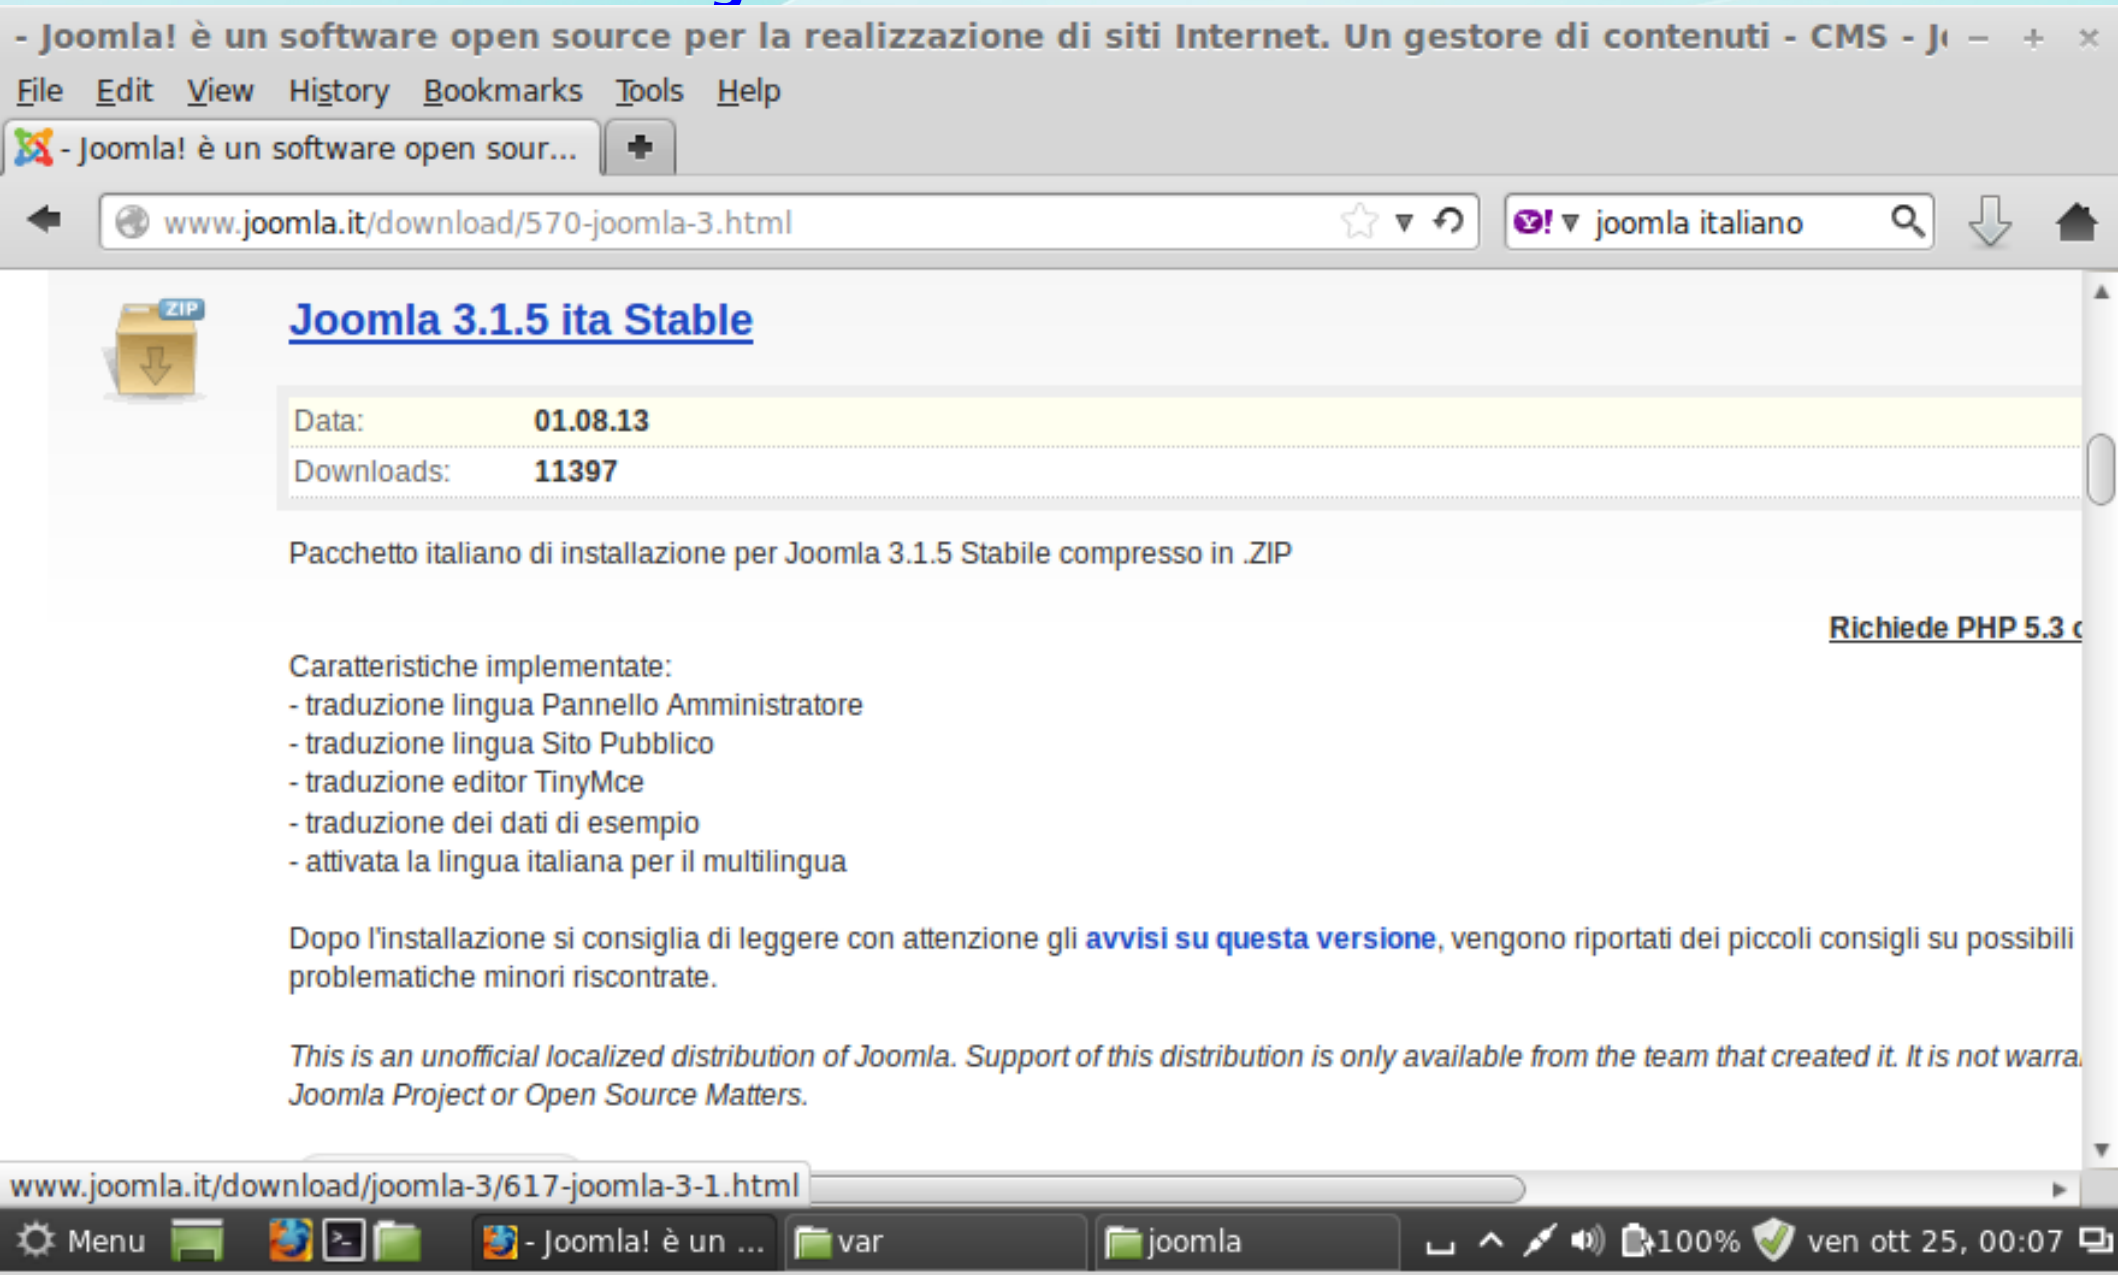
La cartella /var/www è aperta con privilegi elevati



Scarico Joomla 3.1 da http://www.joomla.it

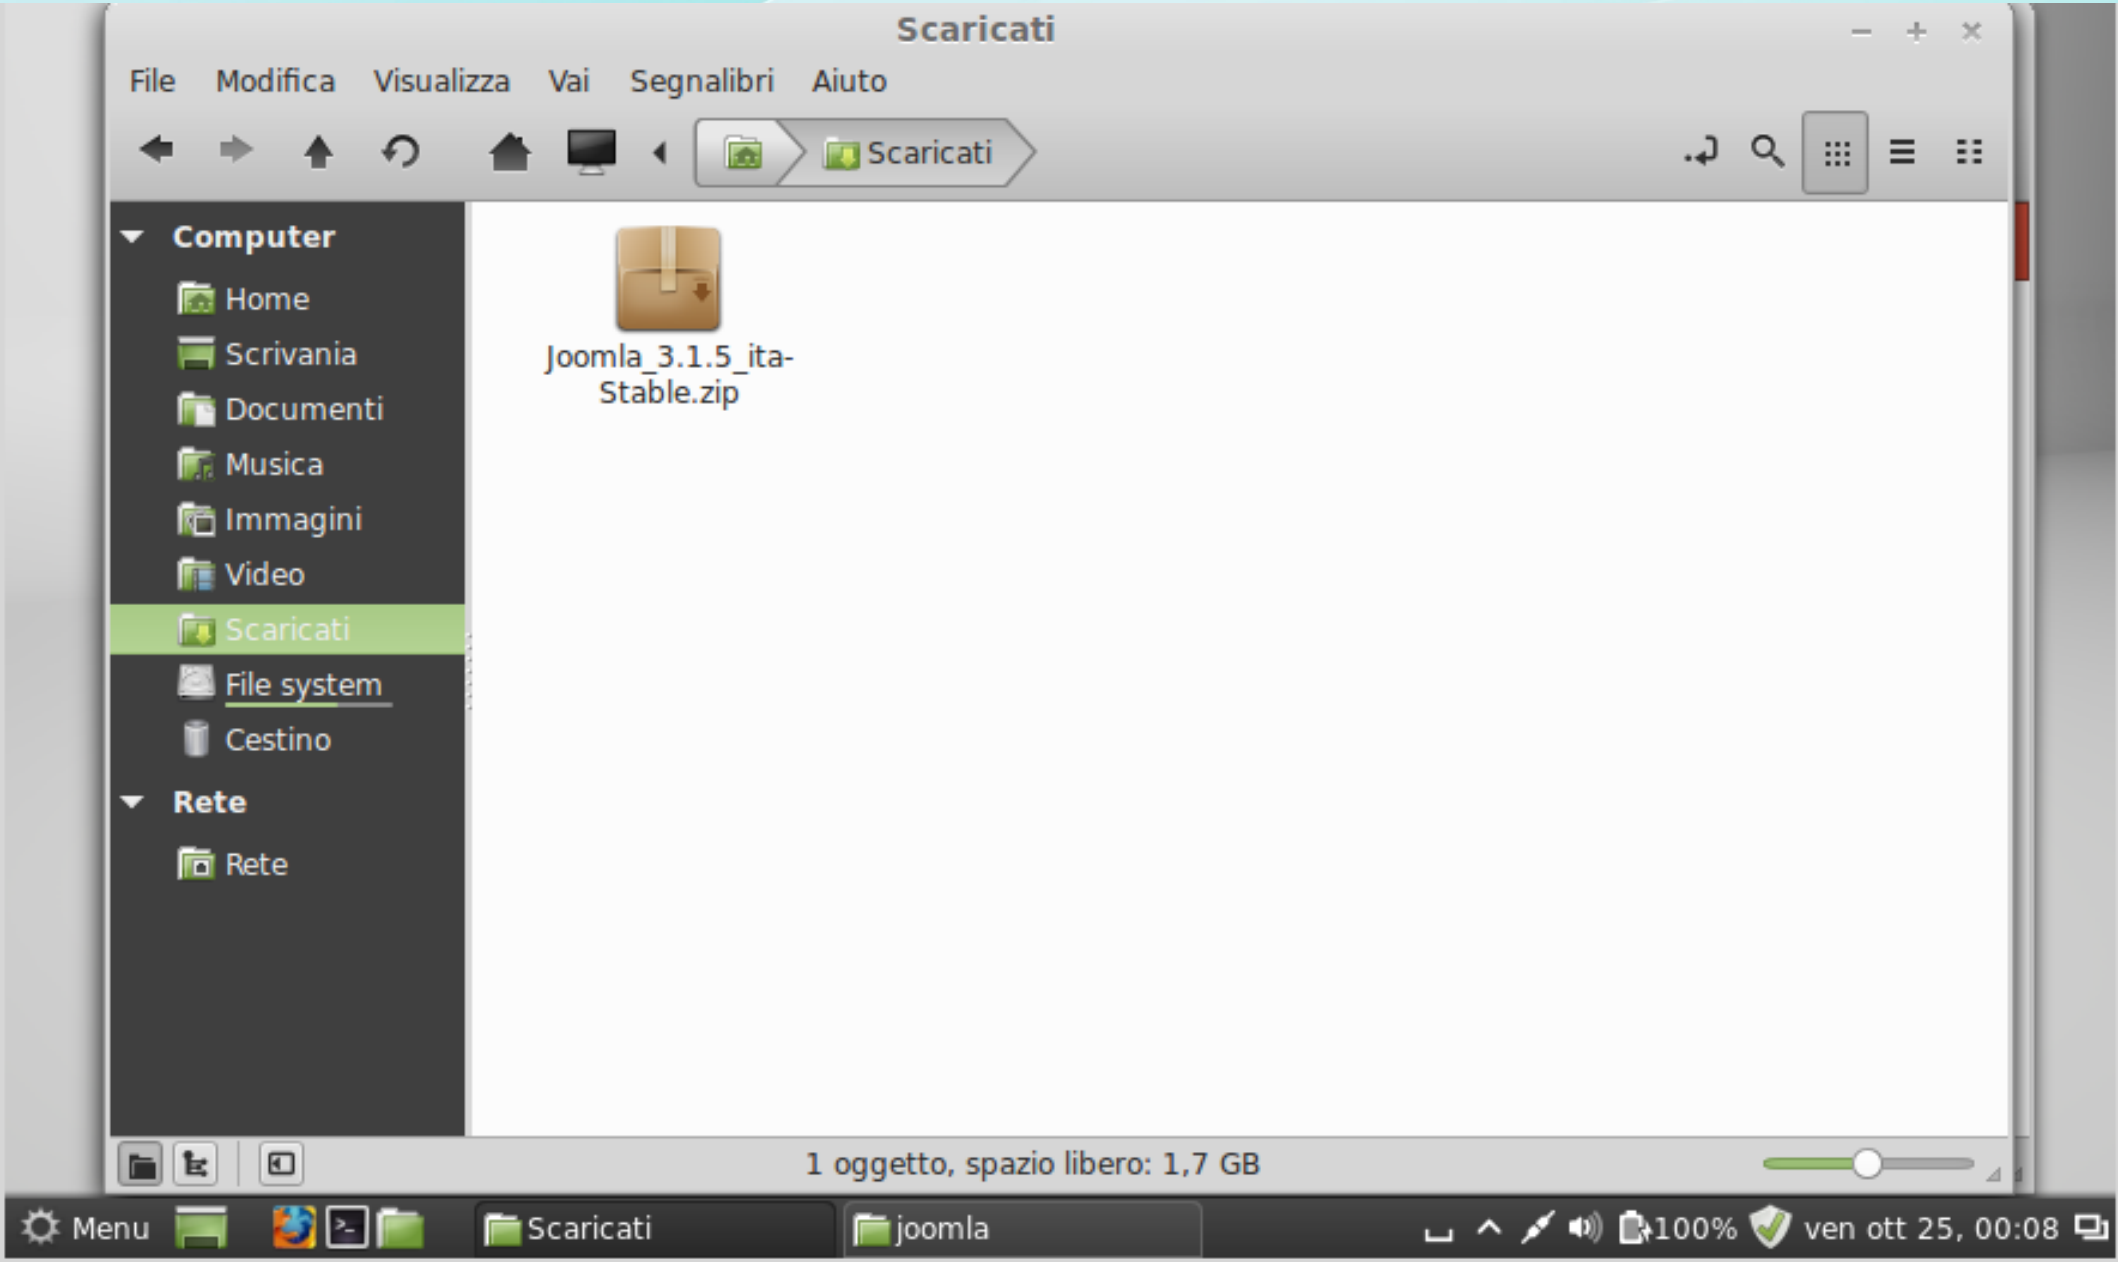


Scelgo l'ultima versione stabile

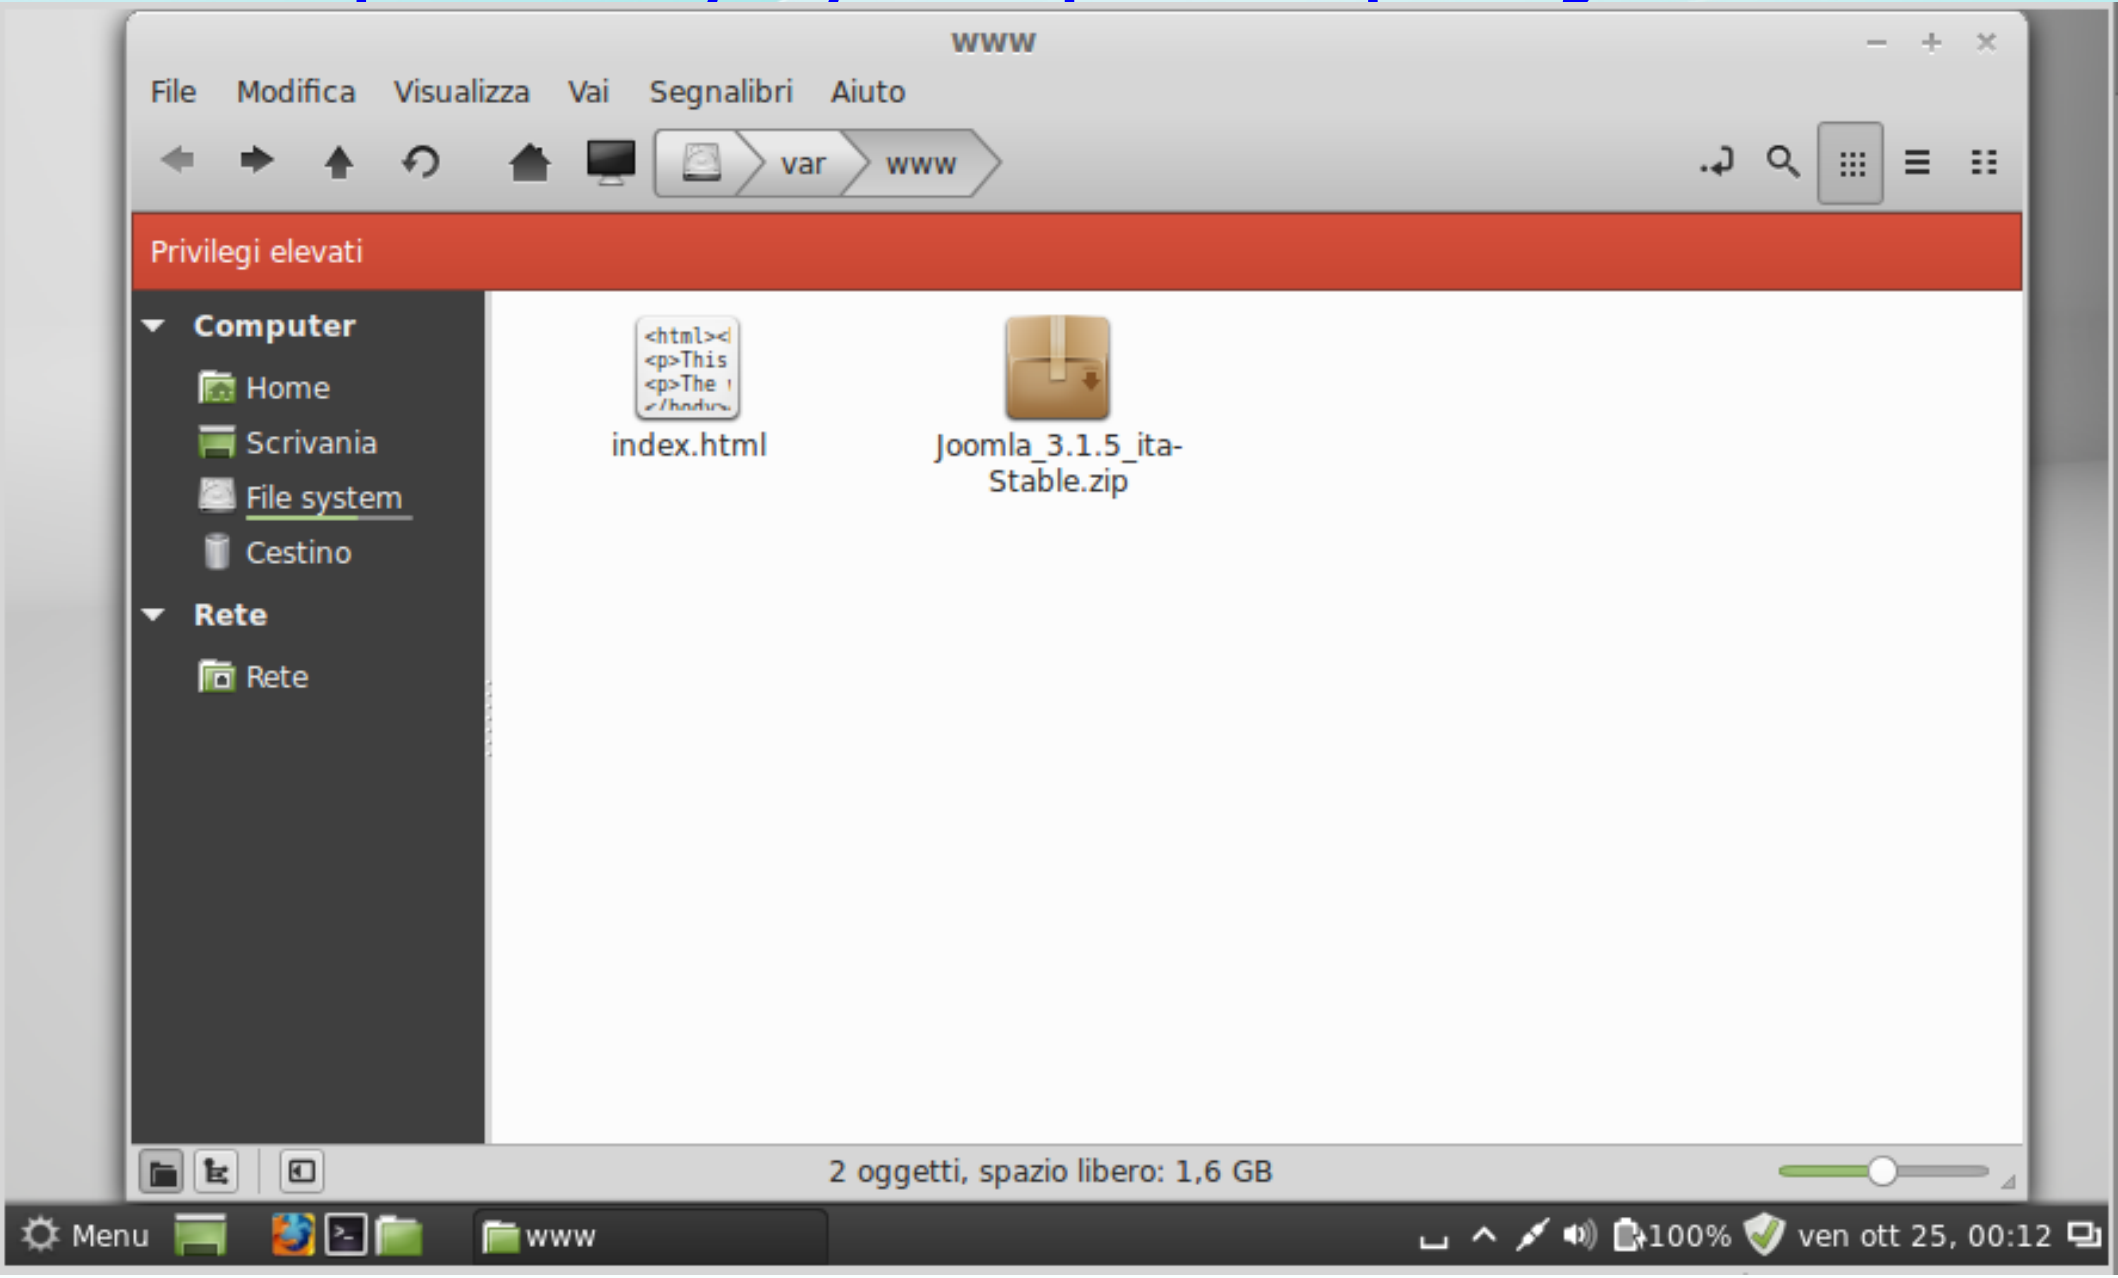


Salvo il file. Verrà posizionato nella cartella “Scaricati”

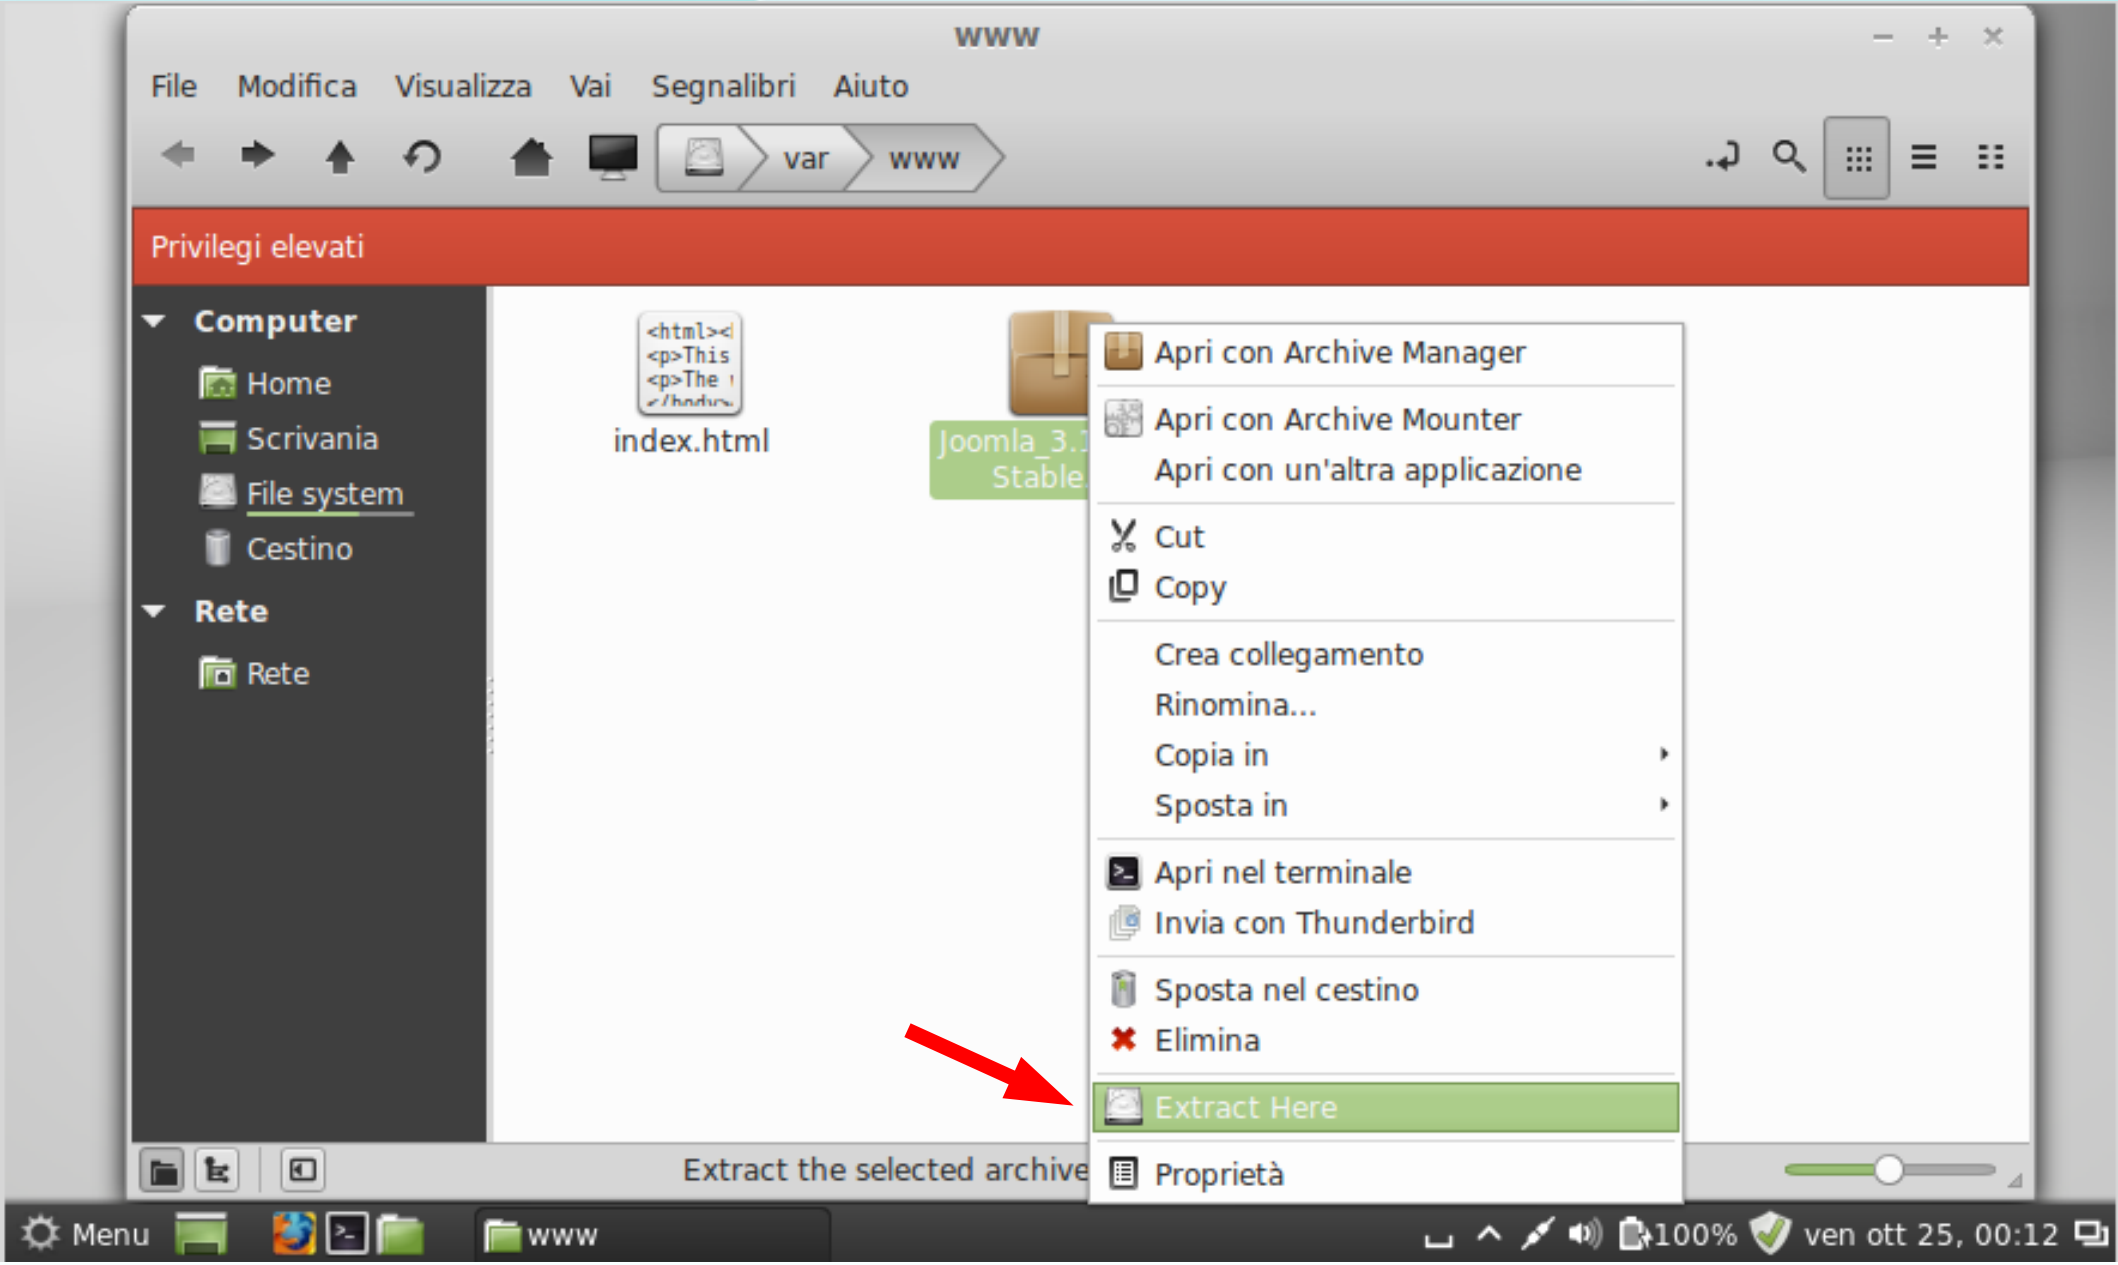
Apro la cartella “Scaricati” nella home



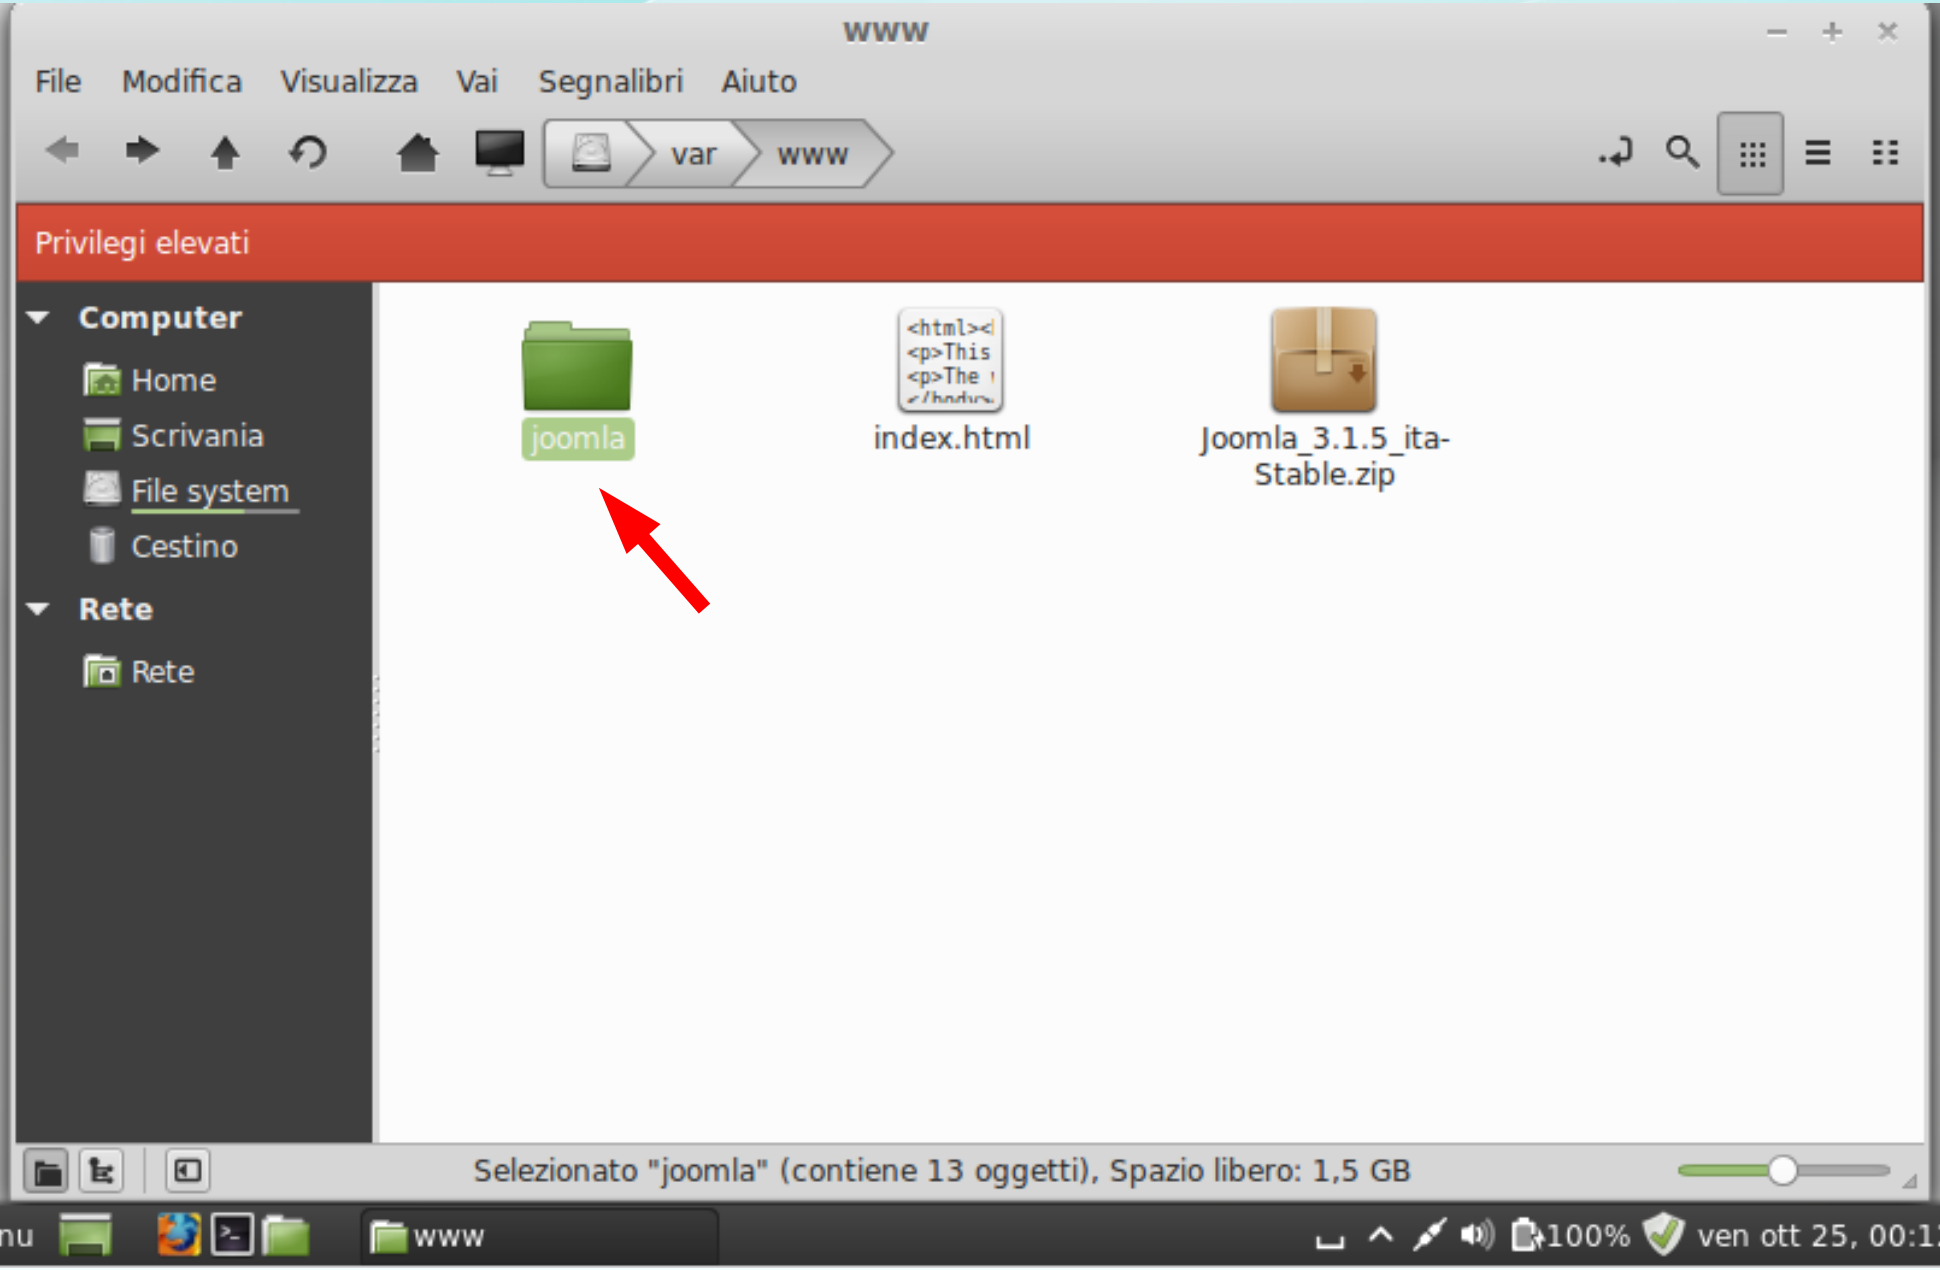
Copio il file in /var/www aperta con privilegi elevati



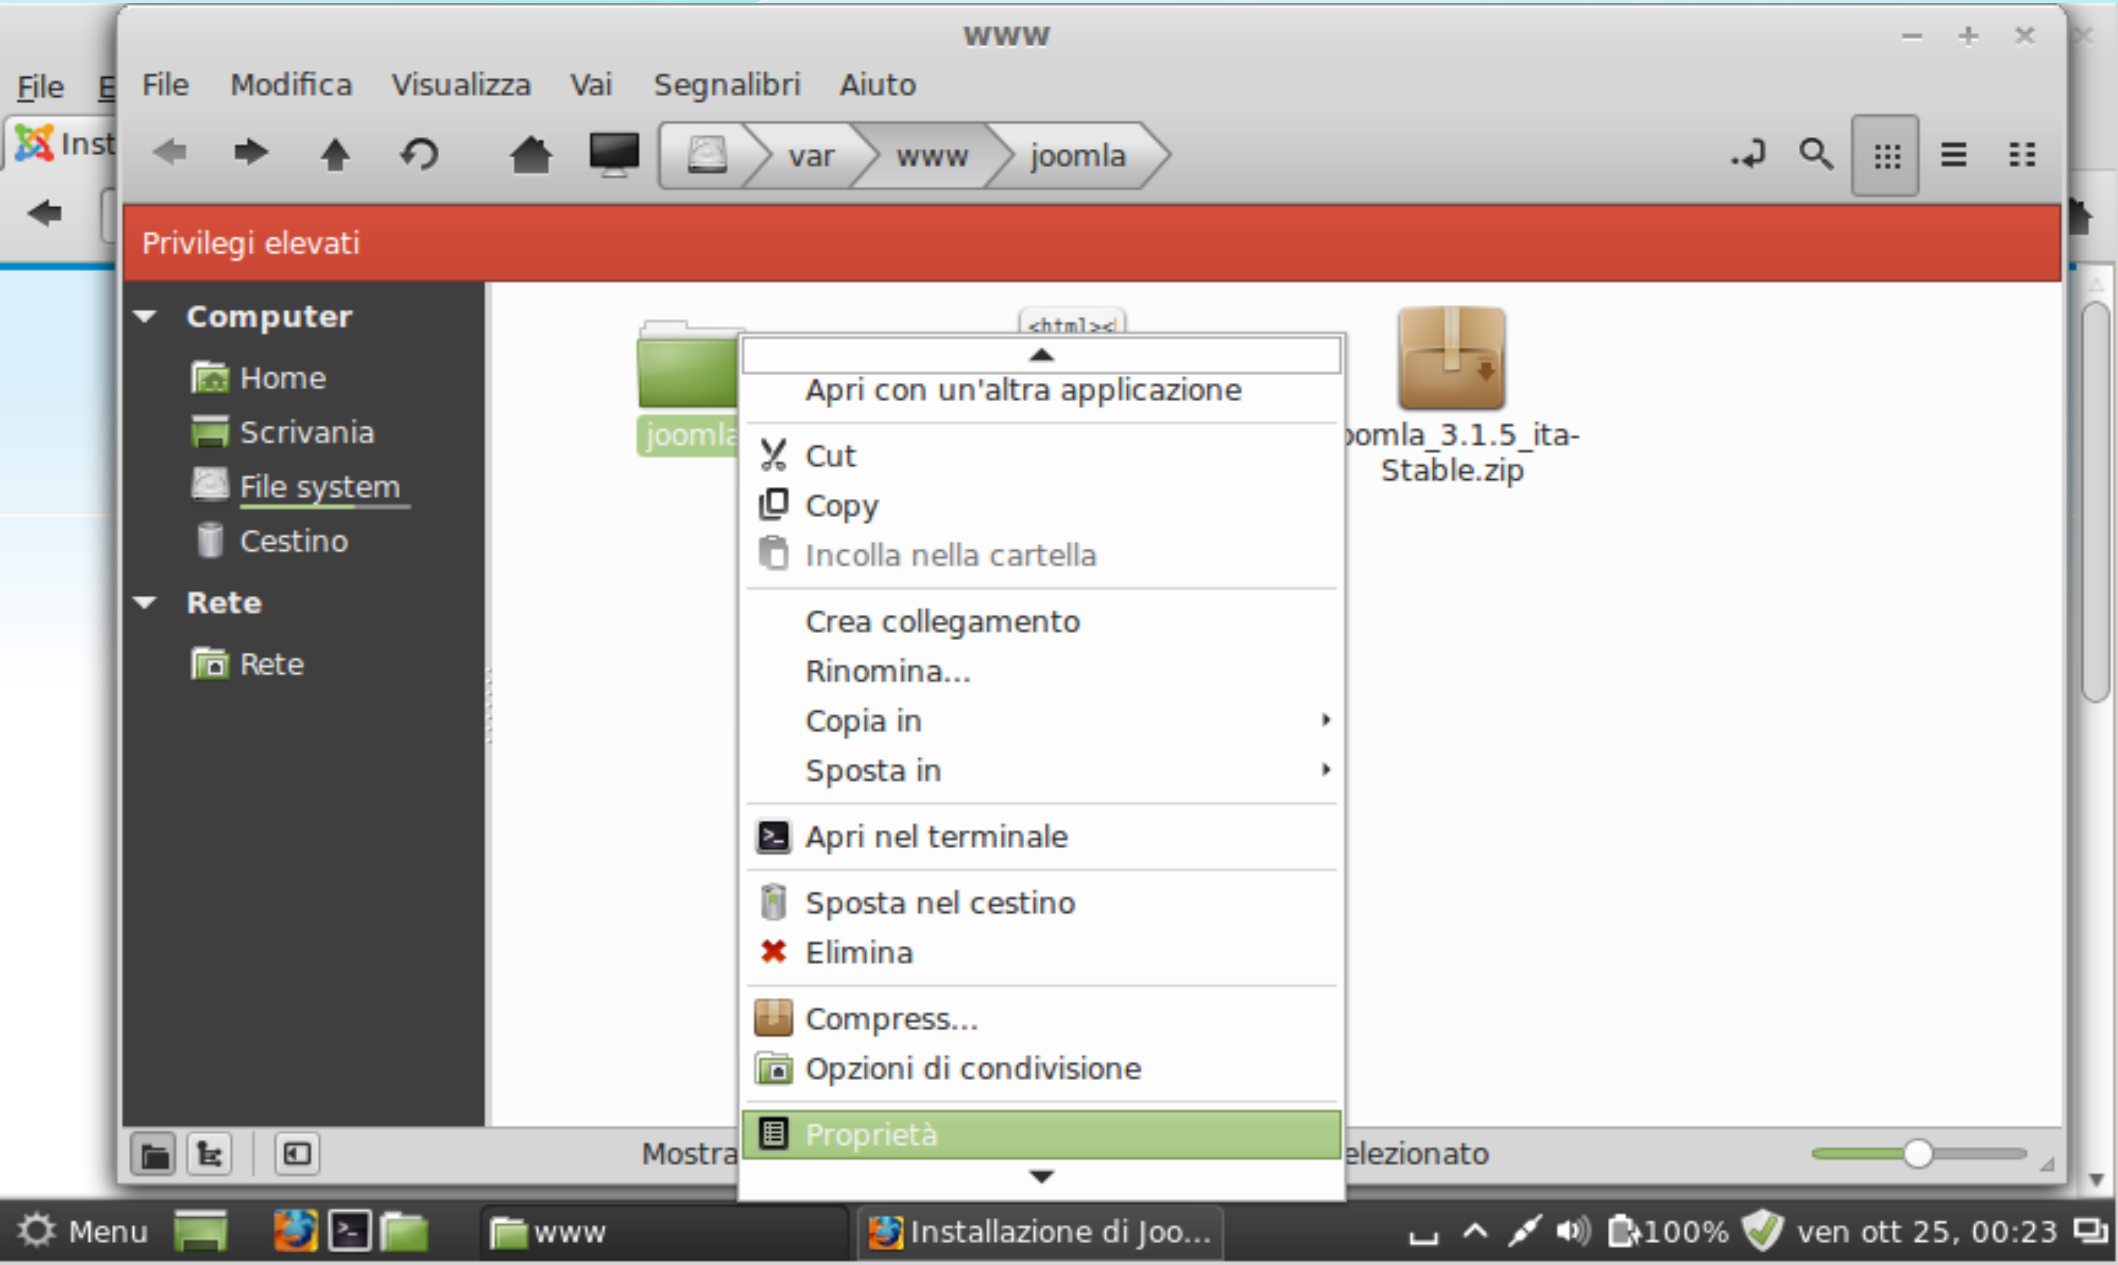
Estraggo i file dall'archivio compresso



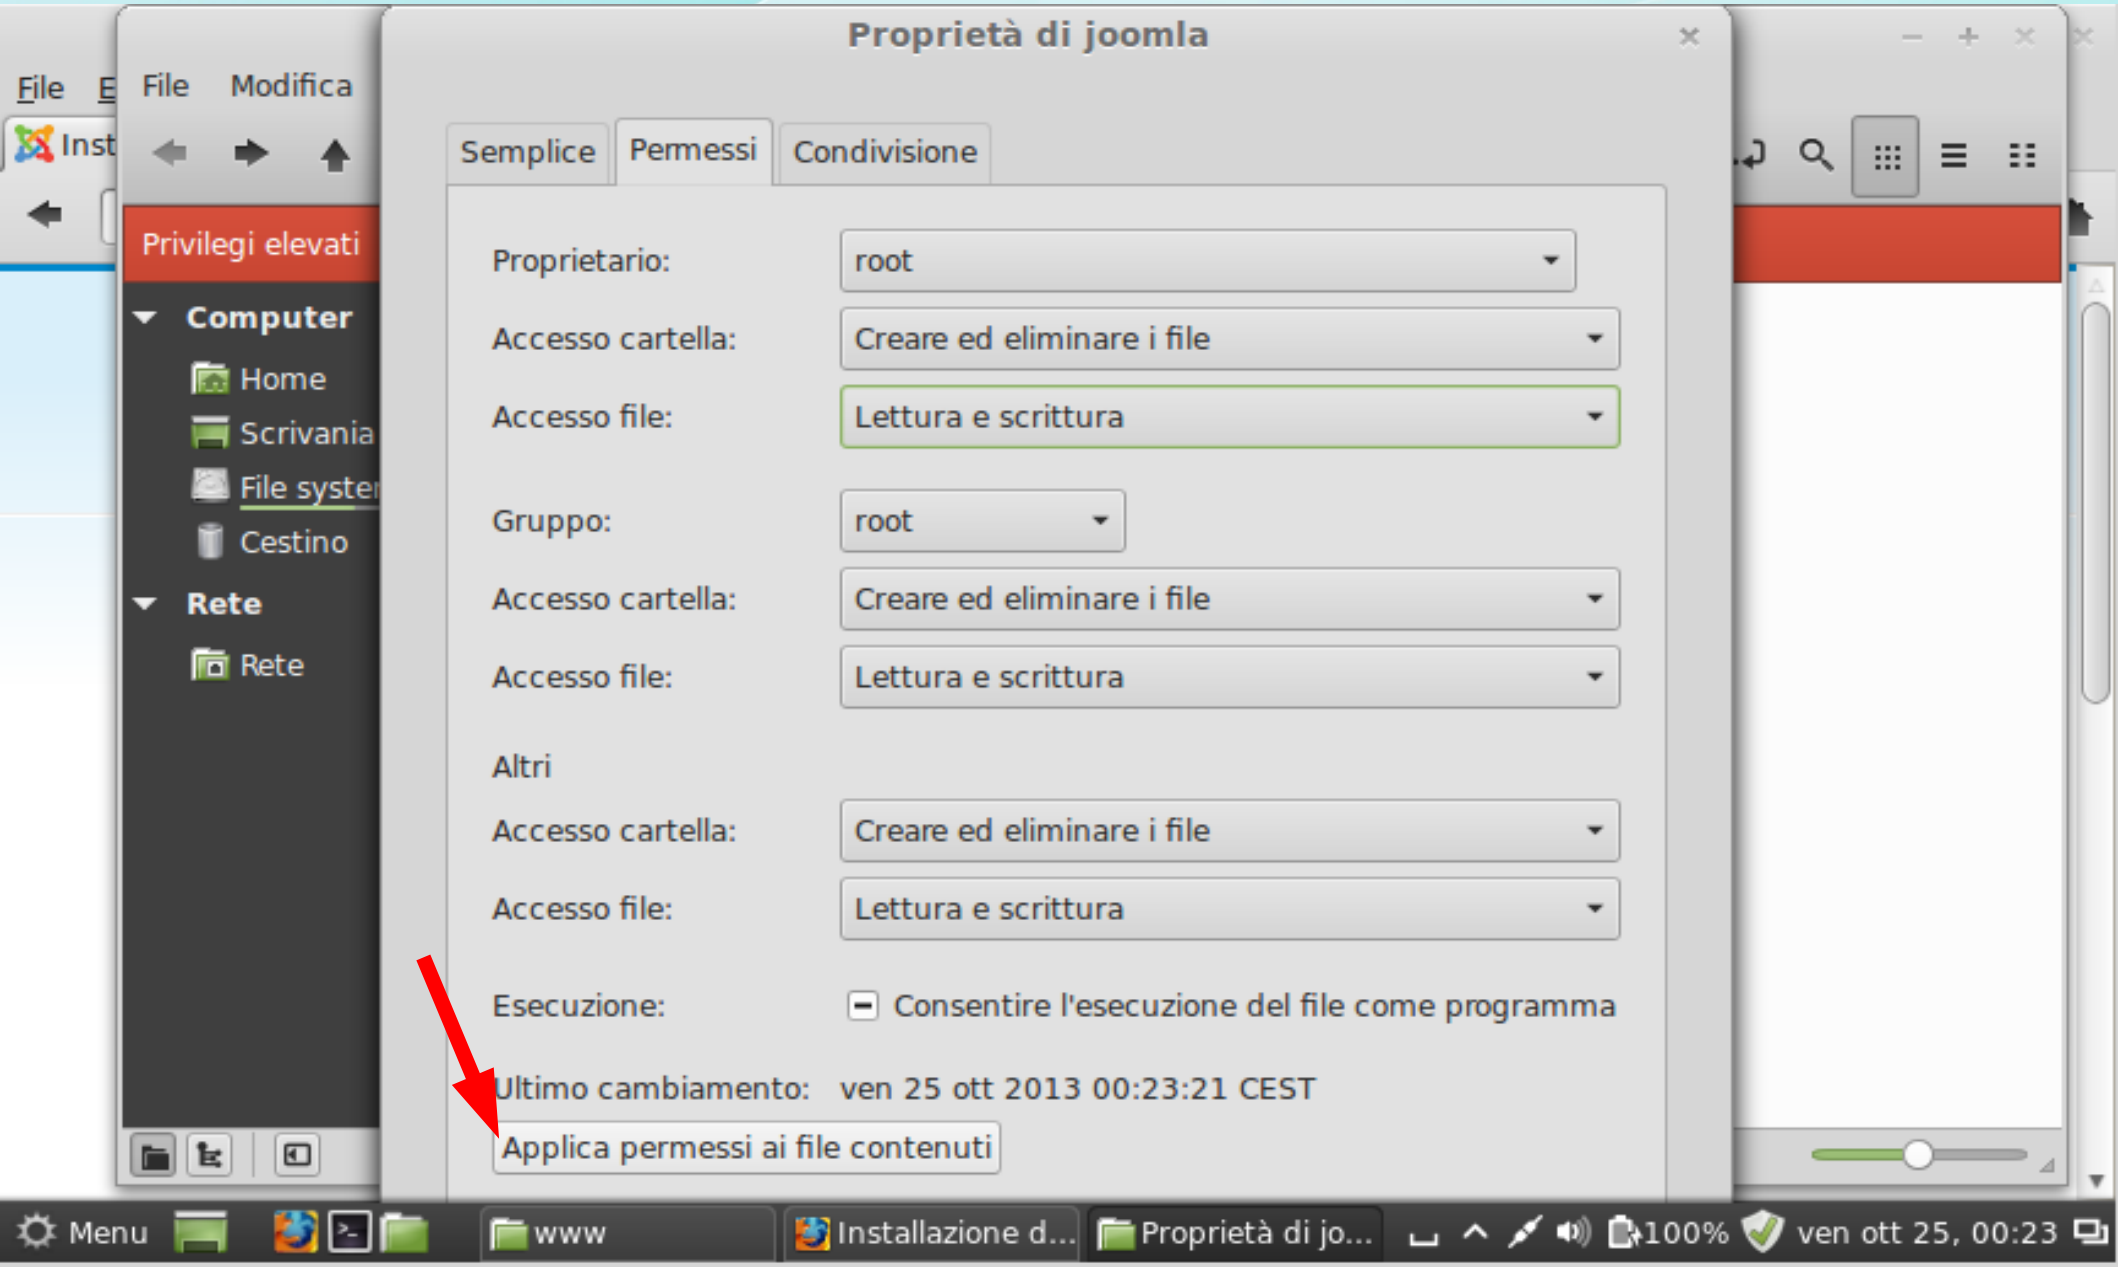
Verrà creata una nuova cartella, che rinomino “joomla”



Vado nelle proprietà della cartella “joomla”



Imposto i permessi come in questa schermata e li applico



Avvio l'installazione da http://localhost/joomla

Inserisco le informazioni richieste

Inserisco le informazioni richieste

Descrizione: Sito di prova per corso durante il Linuxday 2013

Inserisci una descrizione del sito che verrà utilizzata dai motori di ricerca. Generalmente, è ottimale un massimo di 20 parole.

Amministratore del sito.

Nome utente amministratore *: f.galgani

Imposta il nome utente per il tuo account Super Amministratore.

Password amministratore *: ••••••••••

Imposta la password dell'account Super Amministratore e confermala nel campo sottostante.

Conferma Password amministratore *: ••••••••••

Sito Offline: No | Sì

Imposta su offline il lato pubblico del sito quando viene completata l'installazione. Il sito può essere rimesso online successivamente da Configurazione Globale.

Inserisco i parametri del database

1 Configurazione | 2 Database | 3 FTP | 4 Riepilogo dati

Configurazione database

← Indietro → Avanti

Tipo database * MySQLi

Generalmente è "MySQLi"

Nome Host * localhost

Generalmente è "localhost"

Nome utente * root

Potrebbe essere il nome utente Mysql predefinito "root" oppure un nome utente fornito dal tuo gestore di hosting oppure un nome utente da te impostato al momento della creazione del database.

Password ••••••••••

Per la sicurezza del sito è obbligatorio utilizzare la password per l'account del database.

Nome database * joomla

Parametri del database

fornito dal tuo gestore di hosting oppure un nome utente da te impostato al momento della creazione del database.

Password ••••••••••

Per la sicurezza del sito è obbligatorio utilizzare la password per l'account del database.

Nome database * joomla

Alcuni gestori di host consentono un solo nome DB per sito. Se questo è il tuo caso, utilizza il prefisso tabelle per distinguere più di un sito Joomla!®.

Prefisso tabelle * vdbqp_

Scegli un prefisso per le tabelle del database oppure utilizza quello **generato casualmente**. La lunghezza ideale sono tre o quattro caratteri, solo alfanumerici e DEVE finire con un underscore. **Assicurati che il prefisso scelto non sia utilizzato da altre tabelle**.

Processa database vecchio * Salva | Elimina

In caso il prefisso delle tabelle sia lo stesso utilizzato da altre tabelle del database già esistenti, selezionando 'Salva' le tabelle esistenti verranno rinominate in bak_, selezionando 'Elimina' verranno eliminate.

FTP Layer – Non ci serve

Creating Your Site

Dettagli
Scritto da Joomla

Joomla! is all about allowing you to create a site that matches your vision. The possibilities are limitless; this sample site will just get you started.

There are a few things you should know to get you started.

Every Joomla! Web site has two parts: the Site (which is what your site visitors see) and the Administrator (which is where you will want to do a lot of the site management). You need to

Side Module

This is a module where you might want to add some more information or an image, a link to your social media presence, or whatever makes sense for your site.

You can edit this module in the module manager. Look for the Side Module.

Getting Started

It's easy to get started creating your website. Knowing some of the basics will help.

What Is a Content Management System?

A content management system is software that allows you to create and manage webpages easily by separating the creation of your content from the mechanics required to present it on the web.

In this site, the content is stored in a *database*. The look and feel are created by a *template*. The Joomla! software brings together the template and the content to create web pages.

Parks Image Module

Welcome!

This is a basic site about the beautiful and fascinating parks of Australia.

On this site you can read all about my travels to different parks, see photos, and find links to park websites.

This sample site is an example of using the core of Joomla! to create a basic website, whether a "brochure site," a personal blog, or as a way to present information on a topic you are interested in.

Joomla!

Congratulations! You have a Joomla site! Joomla makes it easy to build a website just the way you want it and keep it simple to update and maintain.

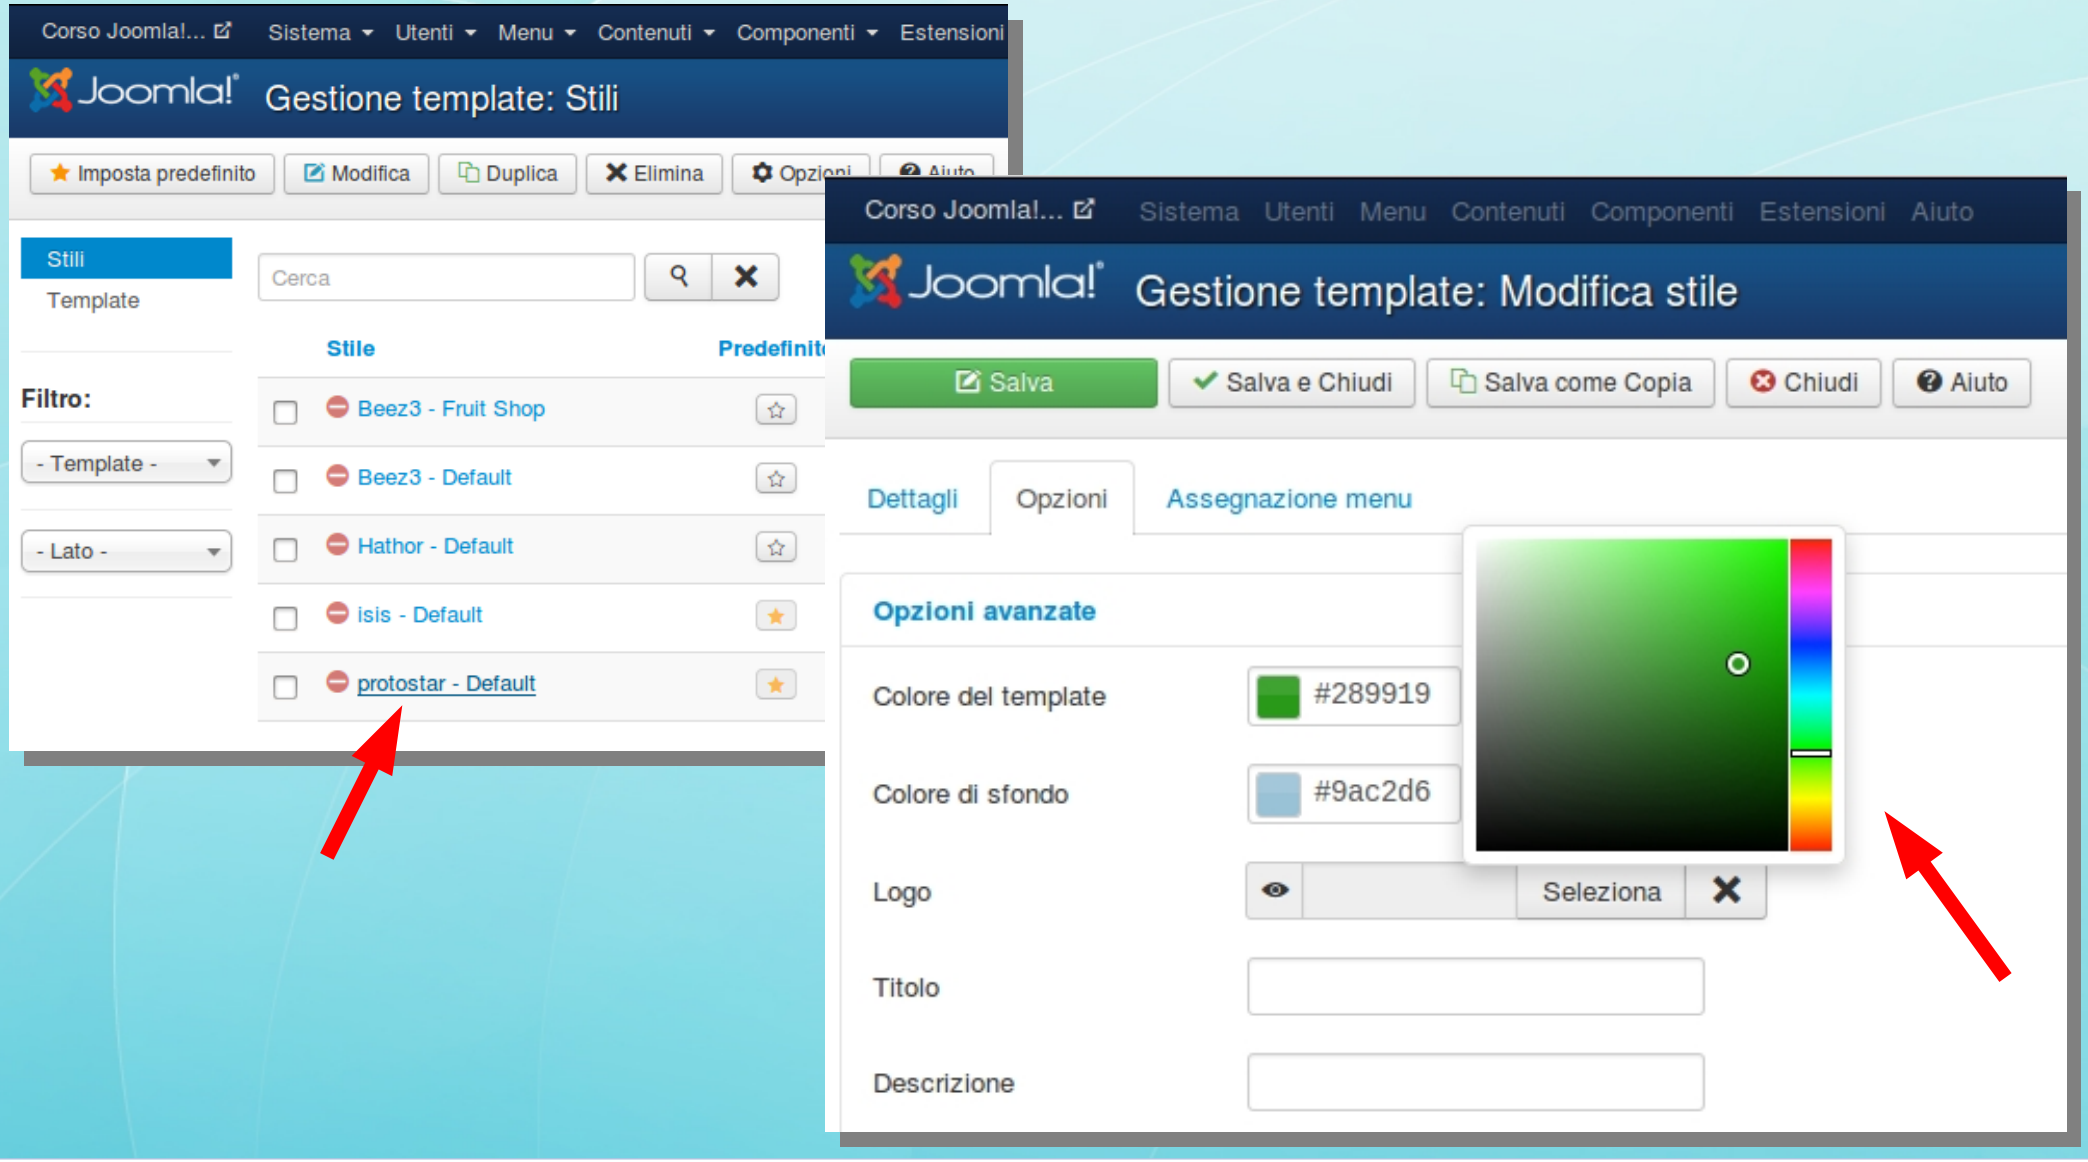
Gli stili permettono di creare e usare differenti versioni personalizzate di un template. Ogni template ha almeno uno stile. Proviamo a personalizzare lo *stile di default di "Protostar"* cambiando i colori

PRIMA
SFONDO GRIGIO
LINK BLU

DOPO
SFONDO BLU
LINK VERDI

Per cambiare colori e altre opzioni, bisogna andare nelle Opzioni Avanzate dello stile, cliccando sullo stile in questione da Gestione Template



E' possibile modificare ogni aspetto del template, anche ciò che non è permesso dalle opzioni degli stili, ad esempio:

Gli utenti possono loggarsi nel sito o nell'amministrazione in base ai permessi attribuiti al gruppo di cui fanno parte.

Ogni account utente deve far parte di almeno un gruppo. I permessi non sono mai attribuiti ai singoli utenti, ma ai gruppi di cui essi fanno parte.

Joomla ha gruppi predefiniti di utenti per il sito e per l'amministrazione.

Gruppi per il sito: visitor (guest), registered users, authors, editors, publishers

Gruppi per l'amministrazione: manager, administrator, super administrator (super user)

CREIAMO IL SEGUENTE SCENARIO:

**Quando qualcuno si registra al sito,
l'amministratore riceve una notifica via email**

**Gli utenti registrati hanno un apposito menù
con un link per creare un articolo**

Un visitatore si registra al sito

**L'amministrazione riceve una notifica e
aggiunge l'utente al gruppo degli authors**

**L'utente registrato scrive un articolo,
ma non ha i permessi per pubblicarlo**

**L'amministratore riceve una notifica che un nuovo contenuto
è disponibile, controlla l'articolo e lo pubblica**

Un esempio di utilizzo dei permessi

Abilitazione delle notifiche email per i nuovi iscritti

Cos'è Joomla?
Joomla! è un Content Management System (CMS) realizzato dagli stessi sviluppatori che hanno portato Mambo CMS all'attuale stato di sviluppo vincendo diversi riconoscimenti internazionali.

Da dove viene il nome?
Joomla! è la traduzione fonetica della parola Swahili "Jumla", che vuol dire "tutti insieme" o "all'unisono".
E' stato scelto poichè l'intero team che stava alla base di Mambo è stato compatto nel suo impegno a proteggere gli interessi dei creatori e della comuniti, che è la vera causa del successo e delle acclamazioni raccolte da questo progetto.
